

Secure Configurations for Hardware and Software

Presenter: Ms. Melissa Vice

Ms. Vice joined CDSE as an Information Technology Specialist and Courseware Developer in May 2009.

Prior to joining CDSE, Ms. Vice was the Global Database Administrator for commercial and military aircraft engine repairs worldwide at General Electric Aviation Division.

Ms. Vice holds two Associates Degrees (Science of Advertising Design and Computer Information Science), an Undergrad Certificate in Information Assurance, and is wrapping up a dual Bachelors / Masters in Cybersecurity at the University of Maryland. She is the 2010 winner of the University of Maryland's Gordon Prize for Managing Cybersecurity Resources.

Navigating the Meeting Room

The screenshot shows a meeting room interface with several elements:

- Poll #1:** A poll titled "How many s Process" with options 3, 4, 5, 6, and No Vote. The "No Vote" option is selected.
- Enlarge Screen:** A button with a magnifying glass icon.
- Q & A:** A section for questions and answers.
- Notes & Announcements:** A section for notes and announcements.
- File Share:** A section for file sharing.

Secure Configurations for Hardware and Software

Secure Configurations for Hardware and Software **CDSE**

Topics:

- Cybersecurity Concerns for Network Devices (Routers, Firewalls, and Gateways)
- Hardening Critical Security Controls to Ensure Device Integrity
- Baseline Compliance Reporting
- Automated Software Solutions (features & potential benefits)
- Secure Configuration Management (i.e.: NIST SP800 series, RMF and FISMA)

5

Cybersecurity Concerns for Network Devices

8

Secure Configurations for Hardware and Software CDSE

Polling Question 1:

Does your organization have a policy to use TLS encryption on internal communications?

- Yes
- No
- I really don't know

9

Secure Configurations for Hardware and Software CDSE

The diagram illustrates two network security configurations. The top section, 'SSL In-Line Inspection Connected to Downstream Tools', shows a Server connected to a Firewall, which is connected to a User's Laptop. An SSL In-Line Inspection Device is positioned between the Server and the Firewall. Data from the inspection device is sent to a Forensics Tool and a DLP (Data Loss Prevention) system. The bottom section, 'Internal SSL In-Line Inspection', shows a Server connected to an SSL In-Line Inspection Device, which is connected to a User's Laptop.

100% SECURE TRANSACTION
TLS
TRANSACTION

Encryption for 100% of Network Traffic

10

Hardening Critical Security Controls

The diagram compares two Wi-Fi network configurations. The top section, 'BYOD Wi-Fi', shows a wireless router connected to a Switch/Router. The bottom section, 'Company Wi-Fi', shows a wireless router connected to a LAN (with a laptop and tablet) and a Switch/Router. Both configurations include a '100% SECURE TRANSACTION TLS TRANSACTION' badge. The Company Wi-Fi configuration also shows a connection to the Internet.

11

Secure Configurations for Hardware and Software CDSE

Hardening Critical Security Controls

The diagram shows two Wi-Fi network configurations with enhanced security. The top section, 'BYOD Wi-Fi', shows a wireless router connected to a Switch/Router. The bottom section, 'Company Wi-Fi', shows a wireless router connected to a LAN (with a laptop and tablet) and a Switch/Router. This configuration includes an Active Directory server, a Secure Web Gateway, and a Next Generation Firewall/Gateway. Both configurations include a '100% SECURE TRANSACTION TLS TRANSACTION' badge. The Company Wi-Fi configuration also shows a connection to the Internet.

12

Hardening Critical Security Controls

13

Secure Configurations for Hardware and Software CDSE

Polling Question 2:

Does your network include Next Generation Firewalls (NGFW) and/ or Secure Web Gateway (SWG) devices?

- Yes
- No
- I really don't know

14

Secure Configurations for Hardware and Software CDSE

Baseline Compliance Reporting

PCI – Federally mandated standards regarding credit card handling by financial institutions. PCI Data Security Standard compliance is validated annually.

HIPAA – Standards for protecting sensitive patient data and protected health information (PHI) for physical, network and processing security. HIPAA compliance is audited by the U.S. Department of Health & Human Services.

FISMA – The Department of Homeland Security provides operational support for federal agencies in securing their information systems and reporting of compromises.

Secure Configurations for Hardware and Software CDSE

Policy

Develop Baseline Compliance Reporting policies that support your organizational requirements.

Secure Configurations for Hardware and Software CDSE

Organization Policy Safeguards:

- User Privacy
- TLS Certificate Validation
- Enforcement Encryption Standards
- Network and Endpoint Controls

*See www.SANS.org Policy Templates

Secure Configurations for Hardware and Software CDSE

Automated Software Solution

Network Configuration and Change Management (NCCM) – Establishes Configuration Items (CIs) for every networked device to record baseline settings for internal policies and regulatory mandates.

19

Secure Configurations for Hardware and Software CDSE

Automated Software Solution

Don't let system changes take you by surprise.

20

Secure Configurations for Hardware and Software CDSE

Risk Management Framework

RMF – Is a risk-based approach to an organization-wide information and cybersecurity controls.

* See NIST SP 800-37 (www.NIST.gov)

21

Secure Configurations for Hardware and Software CDSE

Risk Management Framework

The 6-Step cycle includes:

- Step 1: Categorize
- Step 2: Select
- Step 3: Implement
- Step 4: Assess
- Step 5: Authorize
- Step 6: Monitor
