

# Bloom's Revised Taxonomy and Verb Choices

## Understanding Learning Objectives and Mapping Assessments

Bloom's Revised Taxonomy represents the hierarchy of learning through the levels of knowledge, also known as learning domains. It shows that facts and information need to be learned and **remembered** before concepts can be **understood**, at which point the learner may be able to **apply** that information, **analyze** various points of information, then **evaluate**, and ultimately **create** based upon the preceding foundational levels of knowledge.

### Verb Choices for Each Learning Domain

Remember	Understand	Apply	Analyze	Evaluate	Create
