Presenter: Renee Hartsfield
- Ms. Hartsfield recently joined CDSE as a Cybersecurity Instructor and Course Manager in July 2014
- Ms. Hartsfield is a former Information Assurance Compliance Analyst with the Army Cyber Command
- Previously, she spent several years as an Educator with Florida’s Department of Education and also served over 21 years in the U.S. Army in various capacities in the Information Systems and Information Systems Security fields.
- Ms. Hartsfield holds CISSP, CISA, GSLC, CASP, Security+, and ITILv3 certifications.

Presenter: Rebecca Morgan
- Ms. Morgan is a Counterintelligence and Cybersecurity Instructor with CDSE.
- Ms. Morgan has over twenty years experience in law enforcement, security, and counterintelligence.
- She has served various agencies within the Department of Defense as a Special Agent, CI Analyst, Senior Intelligence Operations Planner, Senior Intelligence Advisor and Instructor.
- Ms. Morgan holds a Master’s Degree in Forensic Science - Corporate Espionage Investigation AND undergraduate degrees in Criminal Justice and Sociology.

Information Security Continuous Monitoring

Overview
- Define Information Security Continuous Monitoring (ISCM)
- Identify elements of an ISCM Program
- Discuss ISCM Program Implementation
- Explain Reporting Procedures
- Integrate Counterintelligence Awareness and Security Concerns into your ISCM Program

What Is Information Security Continuous Monitoring?

NIST 800-137
Maintaining on-going awareness of information security, vulnerabilities, and threats to support organizational risk management decisions

An effective ISCM Program begins with leadership defining a strategy encompassing
- Technology
- Processes
- Procedures
- Operating Environments
- People
Information Security Continuous Monitoring

- Foreign Ownership Control & Influence
- Counterintelligence
- Physical Security
- Personnel Security
- Continuity of Operations

---

Information Security Continuous Monitoring

**ISCM Strategy** -

- Based on the organization's risk tolerance
- Metrics of security status indicators
- Supports the organization's core missions/business processes
- Includes change management
- Drive determinations to reject, transfer, or accept risk
- Maintains awareness of threats and vulnerabilities

---

Chat Question 1

What resources are available to maintain awareness of threats and vulnerabilities?
How to Identify Threats & Vulnerabilities

Defense Security Service
Government Contracting Agency
Intelligence Community Reporting
Your Counterintelligence Office

Counterintelligence is real-time threat awareness.

Counterintelligence helps to:
- Identify threats to your facilities or operations
- Focus security efforts
- Deter the foreign intelligence collection by increasing risk and cost
- Use threat-appropriate Security Countermeasures (SCM)
- Potentially save money on security

Who is targeting your system?

- Foreign Intelligence Entities
- Quasi-Governmental Entities
- Commercial Enterprises
- Individuals
- Insider Threats
Both classified and unclassified systems are targeted.

Targeted information includes:
- Dual-use technology
- Militarily critical technology
- Sensitive company documents
- Proprietary information
- Export controlled/classified information and technology
- Information on DoD-funded contracts

Vulnerabilities

- Mobile Platform Devices
- Vendor/Business Partner Access
- Physical Environment
- Operational Requirements
- Outdated Hardware/Software
- Personnel – willing or unwilling

DoD Insider Threat Program

"Leverages counterintelligence (CI), security, cybersecurity, Human Resources (HR), Law Enforcement (LE), and other relevant functions and resources to identify and counter the insider threat."
Vulnerabilities

NISPOM Reporting Requirements
DoD 5220.22-M
1.301 and 1.302

Process of Implementing ICMS

- Define an ISCM strategy
- Establish an ISCM program
- Implement the ISCM program
- Analyze and Report findings
- Respond to findings
- Review and Update ISCM strategy and program

Define an ISCM strategy based on risk tolerance that maintains clear visibility into assets, awareness of vulnerabilities, up-to-date threat information, and mission/business impacts.

- Tiered Approach
  - Tier 1 – ORGANIZATION
  - Tier 2 – MISSION/BUSINESS PROCESS
  - Tier 3 – INFORMATION SYSTEMS
Establish an ISCM program determining metrics, status monitoring frequencies, control assessment frequencies, and an ISCM technical architecture.

- Derive from specific objectives to maintain/improve security posture
- Organize to support risk decision making/reporting requirements
- Calculate from a combination of security status data
- Determine at any tier across an organization

Implement the ISCM program and collect the security-related information required for metrics, assessments, and reporting. Automate collection, analysis, and reporting of data where possible.

Analyze and Report findings, determining the appropriate response. It may be necessary to collect additional information to clarify or supplement existing monitoring data.

- IAW with strategy
- Collect Data
- Conduct Assessments
- Produce Reports
- Use automation where possible

DoD Security Must:
- Identify and report illicit foreign cyber activities
Chat Question 2

How can an ISCM Program help identify reportable illicit cyber activity?

Reportable Cyber Activities

- Actual or attempted unauthorized access into U.S. automated information systems and unauthorized transmissions of classified or controlled unclassified information.
- Password cracking, key logging, encryption, steganography, privilege escalation, and account masquerading.
- Network spillage incidents or information compromise.
- Use of DoD account credentials by unauthorized parties.
- Tampering with or introducing unauthorized elements into information systems.

Reportable Cyber Activities

- Unauthorized downloads or uploads of sensitive data.
- Unauthorized use of Universal Serial Bus, removable media, or other transfer devices.
- Downloading or installing non-approved computer applications.
- Unauthorized network access.
- Unauthorized e-mail traffic to foreign destinations.
- Denial of service attacks or suspicious network communications failures.
Reportable Cyber Activities

- Excessive and abnormal intranet browsing, beyond the individual's duties and responsibilities, of internal file servers or other networked system contents.
- Any credible anomaly, finding, observation, or indicator associated with other activity or behavior that may also be an indicator of terrorism or espionage.
- Data exfiltrated to unauthorized domains.

Reportable Cyber Activities

- Unexplained storage of encrypted data.
- Unexplained user accounts.
- Hacking or cracking activities.
- Social engineering, electronic elicitation, e-mail spoofing or spear phishing.
- Malicious codes or blended threats such as viruses, worms, trojans, logic bombs, malware, spyware, or browser hijackers, especially those used for clandestine data exfiltration.

Information Security Continuous Monitoring

Respond to findings with technical, management, and operational mitigating activities or acceptance, transference/sharing, or avoidance/rejection.

Review and Update the monitoring program, adjusting the ISCM strategy and maturing measurement capabilities to increase visibility into assets and awareness of vulnerabilities, further enable data-driven control of the security of an organization's information infrastructure, and increase organizational resilience.

- Ensure data is current and complete
- Provide insight into security posture
- Support informed risk management decisions
- Improve ability to respond to known and emerging threats
- Continually refined

Assessments, metrics, and monitoring frequencies change IAW organizational needs.
Countermeasures

- Threat Awareness and Training for all Personnel
- Conduct frequent computer security audits
- Follow your organization's removable media policy
- Comply with the measures in your organization's policies, including the Technology Control Plan (TCP)
- Stay current with patches and updates
- Conduct frequent computer audits
- Do not rely on firewalls to protect against all attacks
- Report intrusion attempts

Additional Resources

- Counterintelligence & Security Countermeasures
- NIST SP 800-137
- Continuous Diagnostics and Mitigation (CDM)
