Course Introduction

Security Breach

Screen 1 of 2

TV anchor: Today DoD officials reported that design and capability details of the new explosives detection and disarmament robot known as ODAD were obtained by foreign operatives. The security breach was traced to Automated Explosives Detection Technologies, a locally based government contractor. The ODAD contract has reportedly been cancelled due to this compromise. Last year AEDT was awarded the five-year contract to provide parts and services supporting the development of the robot.

Initial reports indicate the breach of security occurred when known foreign intelligence entities targeted the company by following the company at trade shows, attending the company's presentations at academic functions, and through requests for information from the company.

Foreign operatives collected unclassified information from the company over time and pieced this information together to discover classified details of the new robot.

AEDT will reportedly lose up to 10 million dollars from the loss of this government contract and may find it difficult to compete for other government contracts in the near future.

The damage from this security breach will affect over 60 AEDT employees here in the local area.

Screen text: Your company CEO, Doug Freeman, has stopped by your office.

Doug: Did you see that news clip? That company's technology is not that different from ours! As my Facility Security Officer, I'm expecting you to prevent a similar situation at our facility. I expect to see a comprehensive plan to integrate counterintelligence awareness into our security program by the end of the week.

Screen text: Select the Next button to continue.

Course Structure and Learning Objectives

Screen 2 of 2

Screen text: Welcome to the Protecting Assets in the NISP Course.

Narrator: Welcome to the Protecting Assets in the NISP Course. What you've just seen is an extreme example of what can happen when a company does not have an effective security program that incorporates counterintelligence awareness. Industry partners must understand that the assets they are protecting identify threats from foreign intelligence entities, recognize their vulnerabilities, and deploy countermeasures to mitigate risk to their organization and to national security. This training is delivered as a scenario in which you are the Facility Security Officer for a company within the National Industrial Security Program. The course consists of three lessons and should take approximately 90 minutes to complete. Here are the course learning objectives.

Screen text: Course Structure and Objectives

Lesson: Introduction to Counterintelligence and Threat Awareness

- Identify the purpose of CI and threat awareness in a security program, DoD policy requirements for industry, and the role of analytical risk management in risk mitigation.

Lesson: Identifying Threats

- Identify sources of threat information, recognize types of threats, common methods used to collect information, and identify the role of the DSS directorate in CI awareness.

Lesson: Countermeasures and Reporting

- Define countermeasures, identify the purpose of foreign travel and foreign visit programs, describe CI training requirements for industry, and explain reporting requirements.

Select the Next button to continue.

Introduction to CI and Threat Awareness

Lesson Introduction

Screen 1 of 3

Screen text: Counterintelligence Integration Plan

Narrator: Your CEO has asked you to create a Counterintelligence Integration Plan for your company.

Screen text: Counterintelligence Integration Plan

Today's objectives

- Identify the purpose of incorporating CI and threat information into a security program.
- Identify CI and threat awareness policy requirements for industry.
- Identify the role of analytical risk management in risk mitigation.

Narrator: You decide to begin by researching the purpose of counterintelligence and threat awareness, why they are important to your security program, how the Defense Security Service and its Counterintelligence Directorate can assist companies like yours, the policies, and requirements that you must satisfy, and how the analytical risk management process can be used to mitigate risk in your facility.

You have several resources from which you can gather information to create your plan for integrating counterintelligence into the security program. These resources include the DSS Industrial Security Representative, or IS Rep, the NISP Operating Manual, or NISPOM, and risk management procedures. Select each resource to begin your familiarization with counterintelligence and threat awareness.

Screen text: Select each resource to learn more.

Select “NISPOM manual”

NISPOM - Special Requirements for Contractors

Screen 1 of 1

Screen text: NISPOM

Narrator: Now that we know why we should incorporate CI and threat awareness into your security program, let’s look at the policies related to CI that industry must understand and follow.

These requirements are covered in DoD 5220.22-M, National Industrial Security Program, or NISPOM.

Screen text: NISPOM

- Controls disclosure of classified information to contractors
- Protects special classes of classified information

Narrator: The NISPOM controls disclosure of classified information by the Federal Government and DoD agencies to their contractors and establishes safeguards for special classes of information.

Let’s go back to your handbook and look at more information on the NISPOM.

Screen text: NISPOM

- Controls disclosure of classified information to contractors
- Protects special classes of classified information

Reportable Events:

- Adverse information concerning cleared employees (NISPOM 1-302a)
- Actual, probable, or possible espionage, sabotage, terrorism, or subversive activities (NISPOM 1-301)
- Suspicious contacts (NISPOM 1-302b)
- Refresher Security Training (NISPOM 3-108)
- Insider Threat Training (NISPOM 3-103a and b)

Narrator: The NISPOM requires that adverse information concerning cleared employees and any suspicious contacts be submitted to the DSS. In addition, actual, probable, or possible espionage, sabotage, terrorism, or subversive activities must be reported to both the DSS and the FBI. You must also provide annual and refresher Insider Threat and security training and make available reports associated with training completions.

Screen text:

NISPOM

- Controls disclosure of classified information to contractors
- Protects special classes of classified information

Reportable Events:

- Adverse information concerning cleared employees (NISPOM 1-302a)
- Actual, probable, or possible espionage, sabotage, terrorism, or subversive activities (NISPOM 1-301)
- Suspicious contacts (NISPOM 1-302b)
- Refresher Security Training (NISPOM 3-108)
- Insider Threat Training (NISPOM 3-103a and b)

Industrial Security Letters:

Narrator: DSS issues Industrial Security Letters, or ISLs, to keep cleared contractors, government contracting activities, and DoD activities aware of developments relating to industrial security. These letters provide information and clarification of existing policies and requirements. ISLs have been issued for reportable events.

Screen text:

NISPOM

- Controls disclosure of classified information to contractors
- Protects special classes of classified information

Reportable Events:

- Adverse information concerning cleared employees (NISPOM 1-302a)
- Actual, probable, or possible espionage, sabotage, terrorism, or subversive activities (NISPOM 1-301)
- Suspicious contacts (NISPOM 1-302b)
- Refresher Security Training (NISPOM 3-108)
- Insider Threat Training (NISPOM 3-103a and b)

Industrial Security Letters:

ISL 2016-02
ISL 2013-05
ISL 2006-01
ISL 2006-02

National Industrial Security Program (NISP) Library

Narrator: ISL 2016-02 provides clarification and guidance to assist contractors as they establish and tailor an insider threat program to meet NISPOM 1-202 requirements. ISL 2013-05 requires contractors to report activities that meet the threshold for reporting, including activities that may have occurred on its unclassified information systems. ISLs 2006-01 and 2006-02 explain the major changes implemented with the 2006 NISPOM revision. All of these ISLs can be found in the NISP Library but they are also available in your handbook for review.

Finally, you should collaborate with your leadership to establish standard operating procedures to specify how employees will accomplish specific requirements from the NISPOM.

Screen text: Select the Next button to continue.

Meeting the IS Rep

Screen 1 of 7

Ryan: Hello! This is Ryan. I'm so glad you reached out to me.

DSS oversees the protection of U.S. and foreign classified information and technologies in the hands of cleared industry under the National Industrial Security Program by providing professional risk management services.

Screen text: Cleared Facility

Contracts

Competitive

Ryan: An effective security program is key to the company's ability to retain its clearance, to get and maintain government contracts, and to remain competitive in the marketplace. Having a Counterintelligence or CI program in place is fundamental to the success of your security program. Since you are close by, let's get together and talk about how you can integrate CI and threat awareness into your security program.

Screen text: Select the Next button to continue.

What is Counterintelligence?

Screen 2 of 7

Screen text: Later that afternoon.....

Ryan: Hi there! Thanks for coming over. As I started to tell you on the phone, in order to integrate CI and threat awareness information into a security program, you need a strong understanding of what counterintelligence is and what it should achieve. So, what is CI? Counterintelligence is information gathered and activities conducted to protect against espionage, other intelligence activities, sabotage, or assassinations conducted by or on behalf of foreign governments or elements hereof, foreign organizations or persons, or international terrorist activities.

In your role as a security professional, you support counterintelligence by implementing security countermeasures to defeat foreign collection activity and by reporting suspicious contacts to the appropriate counterintelligence support team.

Working together, security and CI support national security and protect valuable company assets from theft and compromise.

Screen text: Select the Next button to continue.

How does CI Compliment Security?

Screen 3 of 7

Ryan: How do CI and security relate to each other? CI and security are mutually supportive with shared goals and responsibilities associated with protecting critical resources and sensitive information.

Screen text:

	Security	CI
Focus	Establishing Standards Fixing Weaknesses	Identifying, understanding, and countering collection efforts

Ryan: Security focuses on establishing standards, adhering to those standards, and fixing weaknesses. CI focuses on identifying, understanding, and countering adversary collection efforts.

Screen text:

	Security	CI
Focus	Establishing Standards Fixing Weaknesses	Identifying, understanding, and countering collection efforts
Objective	Reduce Vulnerability	Prevent, detect, and respond to threats

Ryan: The objective of security is to protect assets and reduce vulnerability. The objective of CI is to prevent, detect, respond to and sometimes exploit foreign intelligence entity threats.

Screen text:

	Security	CI
Focus	Establishing Standards Fixing Weaknesses	Identifying, understanding, and countering collection efforts
Objective	Reduce Vulnerability	Prevent, detect, and respond to threats

Perspective	Examines the company's activities and assets from the Company's leadership perspective	Examines the company from the adversary's perspective
-------------	--	---

Ryan: Security looks at the company from the inside-out - examining the company's activities and assets. CI takes an outside-in perspective - examining the company from the adversary's perspective. Together, security and CI provide greater protection for your company's operations and assets. Therefore, your goal is to help your company develop strong practices in both security and CI.

Screen text: Select the Next button to continue.

Security and CI Activities

Screen 4 of 7

Screen text: Examples of incorporating CI into a security program

- Identifying assets and prioritizing protection
- Assessing risk, threat, and vulnerability
- Sharing threat information
- Deploying security countermeasures
- Submitting Suspicious Contact Reports
- Responding to cyber notifications
- Conducting foreign travel briefings and debriefings
- Implementing a foreign visit program
- Establishing an Insider Threat Program
- Providing CI, threat awareness, and insider threat training

Ryan: Examples of incorporating CI into the security program include identifying and prioritizing assets that need protection, assessing risk, threat and vulnerability, sharing threat information, and deploying appropriate security countermeasures. Identifying suspicious contacts and filing Suspicious Contact Reports, or SCRs, with DSS and/or FBI as warranted; responding to cyber notifications and maintaining strong cybersecurity practices; conducting foreign travel briefings and debriefings for employees who travel; implementing a foreign visit program; establishing an insider threat program and providing CI and insider threat awareness and security briefings in accordance with the NISPOM.

Screen text: Examples of incorporating CI into a security program

- Identifying assets and prioritizing protection
- Assessing risk, threat, and vulnerability
- Sharing threat information
- Deploying security countermeasures
- Submitting Suspicious Contact Reports
- Responding to cyber notifications

- Conducting foreign travel briefings and debriefings
- Implementing a foreign visit program
- Establishing an Insider Threat Program
- Providing CI, threat awareness, and insider threat training

Select each link to view CI resources. Then, select the Next button to continue.

The Facility Security Officer and Counterintelligence

Screen 5 of 7

Ryan: FSOs are responsible for protecting sensitive and classified information and technology within their companies. But, what does that really mean?

Screen text: Most losses are not through physical breaches

Ryan: While strong physical security is important, not all losses, thefts, and compromises of sensitive and classified information and technology involve obvious breaches of physical security.

Screen text: Most losses are not through physical breaches
Learn methods currently used by adversaries

Ryan: Foreign intelligence entities and commercial adversaries have devised methods to steal technology that is protected by robust physical security measures. It is essential that you recognize how modern adversaries operate – and learn appropriate responses to counter their efforts.

Screen text: Most losses are not through physical breaches
Learn methods currently used by adversaries
Identify targeted assets
Protect targeted assets

Ryan: Integrating CI and threat awareness into your security program allows you to gain a better understanding of the threats facing your company and develop the best measures to protect your company's valuable assets.

Select the Next button to continue.

Elements of a Successful CI Program

Screen 6 of 7

Ryan: There are several elements that we must consider and include in your CI program. I see that you have your FSO Handbook. Good thinking.

Screen text: Elements of CI Program

Let's talk about some of the elements that contribute to a successful CI program and you can add that information to your FSO Handbook to help build the CI Program and awareness at your facility.

Screen text: Elements of CI Program

- Risk-Based Approach to CI
- DSS Collaboration

Ryan: The foundation of your CI program relies on a risk-based approach and working with DSS to ensure that it is aware of and can help you when issues arise.

Screen text: Elements of CI Program

- Risk-Based Approach to CI
- DSS Collaboration
- Senior Leadership Support
- Employee Awareness

Ryan: Senior leadership support and employee awareness are at the center of a successful CI program.

Screen text: Elements of CI Program

- Risk-Based Approach to CI
- DSS Collaboration
- Senior Leadership Support
- Employee Awareness
- Strong Cybersecurity Program
- Employee Foreign Travel Program
- Foreign Visitors Program

Ryan: Your company must have a strong cybersecurity program to protect your information systems. You must also be vigilant and have programs in place to address both foreign travel and foreign visitors.

Screen text: Elements of CI Program

- Risk-Based Approach to CI
- DSS Collaboration
- Senior Leadership Support
- Employee Awareness
- Strong Cybersecurity Program
- Employee Foreign Travel Program
- Foreign Visitors Program
- SAP/Critical Program Information Protection

Ryan: The CI program must take into account any special programs requiring protection, for example, Special Access Programs or critical program information.

Screen text: Elements of CI Program

- Risk-Based Approach to CI
- DSS Collaboration

- Senior Leadership Support
- Employee Awareness
- Strong Cybersecurity Program
- Employee Foreign Travel Program
- Foreign Visitors Program
- SAP/Critical Program Information Protection
- Insider Threat Program

Ryan: A strong and continuously integrated insider threat program is essential because your company can be most vulnerable from those with authorized access.

Screen text: Elements of CI Program

- Risk-Based Approach to CI
- DSS Collaboration
- Senior Leadership Support
- Employee Awareness
- Strong Cybersecurity Program
- Employee Foreign Travel Program
- Foreign Visitors Program
- SAP/Critical Program Information Protection
- Insider Threat Program
- Reporting

Ryan: The most critical element is reporting. You must not only learn to recognize suspicious activity but to report it in a timely manner to your DSS CI Special Agent and/or the FBI as required. This reporting allows these elements to conduct counterintelligence actions in defense of your company and national security.

Select each link to learn more.

Select the Next button to continue.

Select “Senior Leadership Support.”

Screen text: Senior Leadership Support

Senior leadership includes, but is not limited to, the following positions:

- Chief Executive Officer
- Chief Financial Officer
- Chief Information Officer
- Office of General Counsel
- Office of Information Assurance
- Office of Human Resources, and/or
- Office of Security
- Other Key Management Personnel

Select “Strong Cybersecurity Program.”

Screen text: Strong Cybersecurity Program

Cybersecurity Program

- Establish a resilient cyber defense posture
- Enhance cyber situational awareness
- Assure survivability against complex cyber attacks

Select “SAP/Critical Program Information Protection.”

Screen text: SAP/Critical Program Information Protection

SAP/Critical Program Information Protection

Elements of effective Special Access Program/Critical Program Information Protection:

- Program Protection Plan
- Technology Control Plan (TCP)
- Classification Guide
- Current threat assessments
- Additional guidance on DD Form 254, DoD Contract Security Classification Specification
- Protect Critical Program Information (CPI) as required in contracts, DoDI 5200.39, and DoDI 5240.19.

Select “Insider Threat Program.”

Screen text: Insider Threat Program

Insider Threat Program:

An effective CI program should integrate CI into a company-wide insider threat program that includes company leadership, information technology, security, legal, human resources, and ethics personnel.

Elements of an Insider Threat Program:

- Identification of Insider Threat Program Senior Official
- Training for Program Manager and Insider Threat Team members
- Initial and annual insider threat awareness training for cleared employees
- Information technology (IT) system monitoring and auditing program
- Records maintenance
- Existence of and adherence to insider threat reporting procedures
- Existence of an Insider Threat Policy
- Leadership support
- Self-Assessments of the Insider Threat Program

Select the Next button to continue.

Parting thoughts from the IS Rep

Screen 7 of 7

Ryan: DSS oversees the protection of U.S. and foreign classified information and technologies in the hands of cleared industry under the National Industrial Security Program or NISP by providing professional risk management services. The NISP Operating Manual, or NISPOM, outlines the measures you are required to take to protect national assets in your facility. However, NISPOM compliance is just a start.

A truly effective security program will take into consideration the principles of risk management. These efforts identify your critical assets, determine the threats against them, identify vulnerabilities at your facility that an adversary is likely to exploit, and help you find effective countermeasures. If you haven't already, review the risk management information. You know, threats from foreign intelligence entities, insiders, and others are very real and affect companies like yours every day. I recommend you review the elements of the NISPOM that outline your requirements in these areas.

Screen text: Select the Next button to continue.

Select "monitor."

The Role of Analytical Risk Management in Identifying Threats

Screen 1 of 1

Narrator: Your ability to protect your company's information, technology, and personnel depends on your ability to understand and identify threats. When you weave CI in your security program, you are improving your facility's ability to manage risk.

A successful CI program adopts a risk-based approach to enhanced CI awareness for information, programs, and personnel most likely to be targeted or vulnerable to foreign/competitor collection efforts. Let's briefly look at the analytical risk management process and the goal of each step.

Screen text:

1. Identify Assets and Impact of Loss
2. Identify Threats
3. Identify Vulnerabilities
4. Assess Risk
5. Develop and Apply Countermeasures

Narrator: The risk management steps are identify assets and determine the impact of loss or compromise, identify threats, identify vulnerabilities, assess risk, and develop and apply countermeasures. Select each step to learn more.

Screen text: Select each step to learn more.

Identify Assets and Impact of Loss

Screen 1 of 1

Narrator: To protect against threats, you must consider all sensitive assets – both classified and unclassified. Assets include information, facilities, equipment, material, supplies, and people.

Screen text: Protect any information, technology, or system that if lost or compromised would:

- Significantly damage national security
- Alter program direction
- Compromise the program or system capabilities
- Shorten the expected life of the system
- Cause loss in areas of research, development, testing, and evaluation

Narrator: You must protect any asset, that if compromised would significantly damage national security, alter program direction, compromise the program or system capabilities, shorten the expected life of the system, or require research, development, testing, and evaluation to counter the impact of loss.

Screen text: Select the Next button to continue.

Identify Threats

Screen 1 of 1

Screen text: Identify Threats

- Who are your adversaries?
- Who/What are adversaries targeting?
- What are adversary capabilities?
- What are adversary intentions?

Narrator: Identify the threats to your company. This means attempting to determine who the adversaries of your company and the Government programs you support are, determining who wants to gain unauthorized access to information that you protect, and determining the capabilities and intentions of these adversaries.

Screen text: Select the Next button to continue.

Identify Vulnerabilities

Screen 1 of 1

Screen text (to the left of the screen):

Risk assessment checklist

- Cybersecurity
- People
- Technology
- Contractual
- Supply chain
- Operations
- Environmental
- Product liability

Screen text (to the right of the screen):

Identify Vulnerabilities

Narrator: What types of weaknesses exist that create vulnerabilities?

Screen text (to the right of the screen):

Identify Vulnerabilities

- Information systems?
- Policies and procedures?
- Security?
- How will adversaries exploit vulnerabilities?

Narrator: Are there weaknesses in information systems? In policies and procedures? Or in the implementation of security practices? You must understand these vulnerabilities and consider how an adversary may exploit them.

Screen text: Select the Next button to continue.

Assess Risk

Screen 1 of 1

Screen text: Assess Risk

Narrator: Now think about the impact of your assets being compromised. What is the worst that could happen?

Screen text: Assess Risk

- Loss of economic market?
- Loss of strategic and military advantage?
- Loss of jobs?
- Or loss of life?

Narrator: Loss of economic market? Loss of strategic and military advantage? Loss of jobs? Or loss of life? This impact, coupled with the probability that an adversary has both the intent and capability to exploit the particular vulnerability, determines risk.

Screen text: Select the Next button to continue.

Develop and Apply Countermeasures

Screen 1 of 1

Screen text: Develop and Apply Countermeasures

- Examine each vulnerability
- Develop actions that can mitigate concerns
- Apply the mitigating strategies

Narrator: Finally, you must think about actions or countermeasures that you can develop and apply to mitigate risk. Countermeasures may be specific to the threats and vulnerabilities identified.

Here are a couple of examples. When high-risk and targeted personnel or programs are identified, you can administer additional security and CI awareness training that is specific to

these individuals or programs. Or if your risk is increased because of participation in a conference, trade show, or seminar, you can implement counterintelligence threat awareness briefings and debriefings for attendees. The success of your security program depends on your ability to develop and apply such countermeasures.

Screen text: Select the Next button to continue.

Screen text: Select the Next button to continue.

Knowledge Check

Screen 2 of 3

Question 1 of 5

CI is the information gathered and activities conducted to protect against what?

Select all that apply; then select Submit.

- Espionage, sabotage, terrorism
- Assassinations conducted for or on behalf of foreign governments, organizations, or persons
- Activities by large companies to obtain operating capital within a foreign country
- International terrorist activities

Narrator: CI is information gathered and activities conducted to protect against espionage, other intelligence activities, sabotage, or assassinations conducted by or on behalf of foreign governments or elements hereof, foreign organizations or persons, or international terrorist activities.

Question 2 of 5

Integrating CI and threat awareness into a security program helps to accomplish which of the following?

Select all that apply, then select Submit.

- Assist DoD in maintaining a tactical advantage over foreign intelligence operatives
- Protect valuable company assets from loss and compromise
- Identify which assets need protecting
- Establish countermeasures

Narrator: The goals of including CI in a security program are to protect sensitive company assets from loss and compromise, identify which assets need protecting, and to establish countermeasures.

Question 3 of 5

DoD 5220.22-M NISPOM does which of the following for industry?

Select all that apply, then select Submit.

- Controls the disclosure of classified information to contractors
- Identifies the cost associated with particular contracts
- Protects special classes of classified information
- Requires contractors to hire counterintelligence special agents

Narrator: The NISPOM controls disclosure of classified information by the Federal Government and DoD agencies to their contractors and establishes safeguards for special classes of information.

Question 4 of 5

The NISPOM requires that adverse information concerning cleared employees and any suspicious contacts be reported to DSS.

Select the best answer.

- True
- False

Narrator: That statement is true. The NISPOM requires that adverse information concerning cleared employees and any suspicious contacts be reported to DSS.

Question 5 of 5

CI helps security officials to manage risk in which of the following ways?

Select all that apply, then select Submit.

- Focus on assets and identify the threats to them
- Identify vulnerabilities
- Develop and apply countermeasures
- Develop investigation procedures
- Develop security classification guides

Narrator: CI helps security officials to manage risk by focusing on assets and identify the threats to them, identifying vulnerabilities, and developing and applying countermeasures.

Lesson Summary

Screen 3 of 3

Screen text: Counterintelligence Integration Plan

Today's objectives

- Identify the purpose of incorporating CI and threat information into a security program.
- Identify CI and threat awareness policy requirements for industry.
- Identify the role of analytical risk management in risk mitigation.

Narrator: Well, that wraps up your familiarization with CI and threat awareness. You used available resources to learn the purpose of CI and threat awareness in your security program, the policies and requirements that you must follow, and how analytical risk management can be used in CI awareness.

Screen text: FSO HANDBOOK

Narrator: You have learned quite a bit from your research today.

Screen text: Components to include in the CI integration plan

- Implement NISPOM policy
- Obtain Senior Leadership Support
- Establish a Risk-Based Approach to CI
- Provide Employee Awareness
- Create a Strong Cybersecurity Program
- Establish SAP/Critical Program Information Protections
- Integrate the Insider Threat Program
- Establish Reporting guidelines according to the NISPOM

Download (select if student desires to download a copy of this list)

Narrator: Let's have a look at what information you have collected for our CI Integration Plan. You can update this information in your FSO Handbook as you continue your familiarization with CI and threat awareness.

Screen text: Select the Next button to continue to the next lesson.

Identifying Threats

Introduction to Identifying Threats

Screen 1 of 6

Screen text: Counterintelligence Integration Plan (on the left side of the screen)

Narrator: According to your calendar, you have set aside time to continue gathering information for your CI Integration Plan.

Screen text: Counterintelligence Integration Plan

Today's objectives

- Gives examples of types of threats
- Recognize common methods of operation used for collecting information and technology
- Identify key sources of threat information

Narrator: Today you will research types of threats, which employees are most vulnerable to targeting by foreign intelligence entities, common methods used to collect information and technology, and key sources available for us to gather threat information.

Screen text (on the right side of the screen):

Sources of Threat Information
Threat Awareness Information
Foreign Collection Methods

Narrator: You have already identified resources for your research.

Screen text: Select each resource to begin your familiarization with identifying threats.

Narrator: Select each resource to begin your familiarization with identifying threats. When you complete your research, you should be able to update your CI Integration Plan.

Select “Sources of Threat Information”

Sources of Threat Information: Government

Screen 1 of 2

Narrator: Information about potential threats is all around us. It’s up to us to seek it out and learn from it. Threat summaries and intelligence reports can provide an overall picture of the threat, though it’s important to place this information into context for your specific facility.

Screen text:

- Government Contracting Activity
- Federal Bureau of Investigations (FBI)
- DSS CI Directorate
- Other Federal, State, and Local Agencies

Select each source to learn more.

Select “Government Contracting Activity”

Government Contracting Activity

Screen 1 of 1

Screen text: Government Contracting Agency

- Contract specific threat information and threat assessments

Narrator: For government contractors, the Government Contracting Activity, or GCA, is a good source for obtaining threat information. Individuals within the GCA such as the Contracting Officer’s Representative, or COTR, the Security Officer, or the appropriate Military Department or DSS CI Special Agent may be able to provide us with contract-specific threat information and threat assessments that identifies what your facility has or does that makes it a target.

Select the Next button to continue.

Select “Federal Bureau of Investigation (FBI)”

Federal Bureau of Investigation (FBI)

Screen 1 of 1

Screen text: Federal Bureau of Investigation (FBI)

- Primary responsibility for CI investigations

Narrator: The Federal Bureau of Investigation, or FBI, has primary responsibility for counterintelligence investigations within the United States.

Screen text: Federal Bureau of Investigation (FBI)

- Primary responsibility for CI investigations
- Shares and exchanges information

Narrator: The FBI partners with other Government entities, academic institutions, and the private sector to share and exchange information. This exchange of information is essential to protecting the national and economic security of the United States.

Screen text: Federal Bureau of Investigation (FBI)

- Primary responsibility for CI investigations
- Shares and exchanges information
 - Espionage
 - CI
 - Counterterrorism
 - Economic espionage
 - Cyber and physical security
 - National security concerns

Narrator: You can use the FBI resources that provide threat information related to espionage, counterintelligence, counterterrorism, economic espionage, cyber and physical infrastructure protection, and all national security issues.

Screen text: Select the Next button to continue.

Select “DSS CI Directorate”

DSS CI Directorate

Screen 1 of 1

Screen text: DSS CI Directorate

Narrator: Recall that the DSS CI Directorate publishes an annual trend report that summarizes the threat reports received from cleared contractor facilities and provides information that shows trends related to what is targeted and the methods used.

Screen text: DSS CI Directorate

- Possess or work with the targeted technologies?
- Who may contact employees?
- What collection methods may be used?

Narrator: You must familiarize yourselves with this report and consider how its information affects you: Where does your facility fall within the types of targeted technologies? What can it tell you about how you may be approached and who may approach you? Classified editions of these reports, which contain more detailed information, are available from the DSS CI Directorate to security professionals with appropriate clearance and need-to-know.

Select the Next button to continue.

Select “Other Federal, State and Local Agencies”

Other Federal, State, and local Agencies

Screen 1 of 1

Screen text: Other Federal, State, and Local Agencies

- Department of Homeland Security (DHS)
- Defense Intelligence Agency (DIA)

- Department of State Bureau of Diplomatic Security
- National Counterintelligence and Security Center (NCSC)
- The Interagency OPSEC Support Staff
- State and local law enforcement agencies

Select the Next button to continue.

Narrator: You can find threat information from a variety of other Government sources. Here are some other valuable Federal sources you may wish to consult. Keep in mind that this is not an exhaustive list. You must seek out information from whatever sources are appropriate based on your facility's capabilities and the threats it may face.

Select the Next button to continue.

Sources of Threat Information: Open Sources
Screen 2 of 2

Narrator: While obtaining threat information from Government sources is preferred, there are open sources of threat information.

Screen text (on the left of the screen):

Open sources include:

- News media
- Internet
- Books
- Publications of other companies
- U.S. Government publications and web sites
- Publications and web sites of foreign governments

Narrator: Open sources of threat information include commercial sources such as news media, the internet, and publications from other companies and foreign governments. You should seek out threat information from whatever sources that best suit your organization's needs.

Screen text (on the bottom right of the screen):

IS Rep
 CISA
 FBI
 Other Government Agency

Narrator: Work with your IS Rep and CISA to identify sources that are appropriate for your organization. If you choose to use open sources, always check the validity of the information with your IS Rep, the FBI, or other government agency.

Screen text: Select the Next button to continue.

Select "Threat Awareness Information"

What are Types of Threats Facing Industry?

Screen 1 of 3

Narrator: Threats to your facility are diverse, dynamic, and complex.

Screen text: Types of Threats

Narrator: These threats may arise from people that have legitimate access to your company. This includes company employees, consultants, subcontractors, and custodial personnel.

Screen text: Types of Threats

- Insider Threats
- Business Competitors
- Criminal Activities
- Threats from FIEs
- Terrorist Organizations

Select each button to learn more.

Narrator: Some threats may come from your daily business associations. These types of threats may be business competitors or even criminal activities disguised as authentic business activities. Other threats originate in foreign countries and can include government, quasi-governmental activities, companies, and individuals.

Interactive; select “Insider Threats”

Screen text: Insider Threat

Insider threat is the likelihood, risk, or potential that an insider will use his or her authorized access, wittingly or unwittingly, to do harm to the national security of the United States. Insider threats may include harm to contractor or program information, to the extent that the information impacts the contractor or agency’s obligations to protect classified national security information. Source: DoD 5220.22-M, NISPOM

Narrator: An effective CI program should integrate CI into a company-wide insider threat program that includes company leadership, information technology, security, legal, human resources, and ethics personnel.

Select “Business Competitors”

Screen text: Business Competitors

A company in the same industry or a similar industry which offers a similar product or service

Narrator: Companies with whom you compete for business may use questionable or illegal means to get the upper hand in business. Competitors’ tactics may involve targeting your assets in the same manner as an FIE.

Select “Criminal Activities”

Screen text: Criminal Activities

Persons or groups attempting to exploit lapses in physical security to obtain protected information or products with no pretense of legitimate acquisition

Narrator: FIEs and terrorists may affiliate themselves with others involved in criminal activity to make contacts and obtain information or technology.

Interactive; select “Threats from FIEs.”

Screen text: Threats from FIEs

FIE can include:

- State sponsored foreign intelligence activities or other government organizations
- Foreign commercial organizations
- Quasi-governmental organizations such as universities and research centers, or individuals

Narrator: Any foreign organization, person, or group that conducts intelligence activities to acquire information, influence the company’s activities, or disrupt the company’s mission or goals.

Select; “Terrorist Organizations”

Screen text: Terrorist Organizations

A group that threatens the security, infrastructure, or citizens of a nation or community by planning and carrying out acts of terror

Narrator: Terrorist organizations may seek to disrupt the economy, degrade national security, or cause fear within the general population.

Select the Next button to continue.

Targeted Technology and Information

Screen 2 of 3

Screen text: Targets (on the top left of the screen)

Narrator: Now that you understand who may target you, let’s discuss what the FIEs are after.

Screen text: Technology Information Employees

Narrator: Technology, information, and employees may all be targets. Recall that DSS provides an annual report with threat information.

Screen text: Targets (on the top left of the screen)

Narrator: That report also identifies the most highly targeted assets.

Screen text (on the top left of the screen): Targets

Highly-targeted technology

- C4
- Aeronautic Systems

- Electronics
- Optics
- Radars
- Armaments & Survivability
- Marine Systems
- Energy Systems
- Software
- Materials - Raw & Processed

Narrator: According to the current DSS trend analysis, in recent years, the most targeted technologies are command, control, communication, and computers, also known as C4, aeronautic systems, electronics, optics, radars, armaments, marine systems, software, and materials. As you can see, both classified and unclassified technologies are targeted.

Remember, most programs are targeted at one time or another. It's critical to understand that your technology may not be targeted as frequently, but that even one loss can have a negative impact on national security and your bottom line.

Screen text (on the top right of the screen): Industrial Base Technology List
Targeting U.S. Technologies Report

Narrator: You can review the Industrial Base Technology List to learn the systems, equipment, and materials found in each category. You can access the most recent Targeting U.S. Technologies Report from the course Resources.

Select; "Industrial Base Technology List"; hyperlinks to <https://www.cdse.edu/documents/cdse/CI-JobAidSeries-IBTL.pdf>

Select; "Targeting US Technologies Report." Selecting each of these links sends user to external webpage.

Select the Next button to continue.

Areas Targeting U.S. Technologies

Screen 3 of 3

Screen text: Targets

Narrator: Trend analysis of recent reporting to DSS reflects a continued rise in reported suspicious contact attempts to obtain sensitive or classified information and technology from industry. Based on reporting to DSS, all geographic regions are known to target U.S. Defense technology.

Screen text: Targets
East Asia
Pacific entities

Narrator: In recent years, East Asia and the Pacific entities have remained the most significant collectors of sensitive or classified U.S. technology and information.

Screen text: Targets
East Asia
Pacific entities
Europe
Eurasia

Narrator: Europe and Eurasia also represent a significant threat.

Screen text: Targets
East Asia
Pacific entities
Europe
Eurasia

Near East

Narration: Entities from the Near East are also active collectors of sensitive or unclassified technology and information.

Screen text: Targets
East Asia
Pacific entities
Europe
Eurasia
Near East
Western Hemisphere
Africa

Narrator: While you see fewer reports from the Western Hemisphere and Africa, threat actors are still present in this region. As you can see, foreign collectors from all nations target both classified and sensitive U.S. technology and information. It's important to recognize suspicious behaviors and activities that may represent collection attempts regardless of the source. So, let's talk about some of the methods that might be used to illicitly acquire information and how you might recognize collection activities.

Screen text: Select the Next button to continue.

Select "Foreign Collection Methods"

Foreign Collection Methods

Screen 1 of 8

Screen text: Common Collection Methods
Indicators
Countermeasures

Narrator: To manage risk associated with targeting of your facility and its assets, you must be knowledgeable of common methods used to collect information, indicators that attempts are being made to collect information, and potential countermeasures.

Screen text: Foreign Collection Methods

- Requests for Information
- Academic Solicitation
- Suspicious Network Activities
- Targeting at Conferences, Conventions, and Trade Shows
- Solicitation and Marketing
- Seeking Employment
- Foreign Visits
- Elicitation and Recruitment

Narrator: According to DSS analysis, the most common foreign collection methods used in over 80% of targeting cases are requests for information, academic solicitation, suspicious network activity, targeting at conferences, conventions, and trade shows, solicitation and marketing, seeking employment, foreign visits, and elicitation and recruitment.

The nature and extent of industry reported suspicious contacts suggest a concerted effort to exploit cleared contractors for economic and military advantage. These contacts range from outright attempts to steal technology to seemingly innocuous business ventures. Targeting indicators are signs that an individual or group may be involved in the illegal collection of information on behalf of an FIE. As part of your overall risk management strategy, you will implement countermeasures to mitigate the risk associated with foreign collection methods. Countermeasures are the employment of devices or techniques that impair the operational effectiveness of enemy activity. Countermeasures may include anything that effectively negates an adversary's ability to exploit vulnerabilities. Let's look at each of the collection methods, their indicators, and potential countermeasures.

Screen text: Select the Next button to continue.

Foreign Collection Methods: Requests for Information

Screen 2 of 8

Screen text: Requests for Information

- Techniques
- Targets
- Indicators
- Countermeasures

Narrator: Requests for information is an attempt to collect protected information by directly or indirectly asking, requesting, or eliciting the protected information.

Screen text: Select each collection component to learn more.

Select “Techniques”

Requests for Information: Techniques
Screen 1 of 1

Screen text: Requests for Information
Techniques

- Foreign companies
- Individuals
- Foreign government officials
- Quasi-Governmental Organizations

Narrator: Requests for information are normally unsolicited and often originate from unknown sources like foreign companies, individuals, or foreign government officials or quasi-government organizations.

Screen text: Select the Next button to continue.

Select “Targets”

Requests for Information: Targets
Screen 1 of 1

Screen text: Targets

- Business Developers
- Sales
- Marketing
- Subject Matter Experts (SMEs)
- Information Technology (IT)

Narrator: These requests often target business developers, sales, marketing, subject matter experts or SMEs, and Information Technology, or IT, personnel.

Screen text: Select the Next button to continue.

Select “Indicators”

Requests for Information: Indicators
Screen 1 of 1

Screen text: Requests for Information
Indicators

Narrator: Requests for information are often submitted by email and may ask for technical information or technology capabilities.

Screen text: Requests for Information
Indicators

- Uses a foreign address

- Identifies self as a student or consultant
- Identifies employer as a foreign government
- States that work is being done for a foreign government or program

Narrator: Requests might come from a foreign address, the requestor may provide identification as a student or consultant, claim employment with a foreign government, or claim that work is being performed on behalf of a foreign government or program.

More Examples button:

- Asks questions about defense-related programs using acronyms specific to the program
- Insinuates the third party he/she works for is "classified" or otherwise sensitive
- Advises the recipient to disregard the request if it causes a security problem, or the request is for information the recipient cannot provide due to security classification, export controls, etc.
- Advises the recipient not to worry about security concerns
- Assures the recipient that export licenses are not required or not a problem
- Fails to identify the end user

Narrator: Other requests might ask for or about technology related to a defense program or say that it's ok for you to share the information with them. FIEs are continuously changing their methods of operation. This list only identifies those methods that have most often been observed and reported.

Screen text: Select the Next button to continue.

Select "Countermeasures"

Requests for Information: Countermeasures Screen 1 of 1

Screen text: Requests for Information

Countermeasures

- View unsolicited and direct requests with suspicion, especially those received via the internet.
- Respond only to people who are known after verifying their identity and address and ensuring proper authorization for release of information. If the requester cannot be verified or the request is suspicious. Do not respond in any way and report the incident

Narrator: We should view direct but unsolicited requests as suspicious - especially if they are delivered through the internet. We must release information only to people or groups for which you can verify their identity, address, and authorization to access the information requested. Finally, if you cannot verify the request or if the request is suspicious, do not respond to the request in any way and immediately report the incident to the FSO or other security personnel.

Screen text: Select the Next button to continue.

Screen text: Select the Next button to continue.

Foreign Collection Methods: Academic Solicitation Screen 3 of 8

Screen text: Academic Solicitation

- Techniques
- Targets
- Indicators
- Countermeasures

Narrator: Academic solicitation is an effective way of collecting information because of the collaborative nature of the academic community. FIEs attempt to collaborate with U.S. research institutions under the guise of legitimate research. This method offers FIEs access to developing technologies and cutting-edge research that not only may satisfy their immediate technological requirements but may provide them better educated scientists and researchers for their indigenous technology development.

Screen text: Select each collection component to learn more.

Select “Techniques”

Academic Solicitation: Techniques Screen 1 of 1

Screen text: Academic Solicitation

Techniques

- Foreign Universities or Academic Centers
- Individuals overseas or placed in the U.S.
- Quasi-governmental Organizations, such as research centers and institutes

Narrator: Academic solicitation uses students, professors, scientists, or researchers as collectors improperly attempting to obtain sensitive or classified information.

Screen text: Select the Next button to continue.

Select “Targets”

Academic Solicitation: Targets Screen 1 of 1

Screen text: Academic Solicitation

Targets

- Universities
- Government
- Private research facilities
- Contractor cleared facilities

- Admissions departments
- Subject Matter Experts or SMEs
- Professors and faculty

Narrator: This method targets universities, Government, private research facilities, cleared facilities, admissions departments, SMEs, professors, and faculty members.

Screen text: Select the Next button to continue.

Select “Indicators”

Screen 1 of 1 - Academic Solicitation: Indicators

Screen text: Academic Solicitation

Indicators

- Applications for admission to advanced science, technology, engineering, and math degree programs associated with cleared facilities
- Requests for review of academic papers
- Request for study or consult

More Examples button:

- Foreign students accepted to a U.S. university or at postgraduate research programs are recruited for their collection efforts.
- U.S. researchers receive requests to provide dual-use components under the guise of academic research.
- U.S. researchers receive unsolicited emails from peers in their academic field soliciting assistance on fundamental and developing research.
- U.S. professors or researchers are invited to attend or submit a paper for an international conference.
- Overqualified candidates seeking to work in cleared laboratories as interns.
- Candidates seeking to work in cleared laboratories whose work is incompatible with the requesting individual’s field of research.
- Subject matter experts (SMEs) receive requests to review research papers in hopes the SME will correct any mistakes.

Narrator: Collection for this method often involves applications for admission to advanced science, technology, engineering, and math degree programs associated with cleared facilities, requests for review of academic papers, or requests for study or consult.

Screen text: Select the Next button to continue.

Select “Countermeasures”

Academic Solicitation: Countermeasures

Screen 1 of 1

Screen text: Academic Solicitation

Countermeasures

- View unsolicited and direct requests with suspicion, especially those received via the internet.
- Respond only to people who are known after verifying their identity and address and ensuring proper authorization for release of information.

Narrator: As with requests for information, you should view academic solicitations received via the internet with suspicion. Respond only to people whose identity and address can be verified. Ensure that all responses include only information authorized for release.

Screen text: Select the Next button to continue.

Screen text: Select the Next button to continue.

Foreign Collection Methods: Suspicious Network Activities Screen 4 of 8

Screen text: Suspicious Network Activities

- Techniques
- Targets
- Indicators
- Countermeasures

Select each collection component to learn more.

Narrator: Suspicious network activity is the fastest growing method of operation for foreign entities seeking to gain information about U.S. interests.

Select “Techniques”

Suspicious Network Activities: Techniques Screen 1 of 1

Screen text: Suspicious Network Activities

Techniques

- Input of falsified, corrupted data, malware, malicious code, viruses
- Hacking
- Chat rooms-elicitation
- Email solicitation (phishing)

Narrator: FIEs may introduce corrupted or falsified data, malware, malicious code, or viruses into information systems. FIEs may also directly hack a system, elicit information from chat rooms, or email solicitations, also known as phishing.

Screen text: Select the Next button to continue.

Select “Targets”

Suspicious Network Activities: Targets

Screen 1 of 1

Screen text: Suspicious Network Activities
Targets

- Any person, system, or facility

Narrator: An FIE may target anyone or any system at any facility and may employ multiple techniques within a given target.

Screen text: Select the Next button to continue.

Select “Indicators”

Suspicious Network Activities: Indicators

Screen 1 of 1

Screen text: Suspicious Network Activities
Indicators

- Unauthorized system access attempts
- Emails received from unknown senders with foreign addresses
- Unauthorized hardware and software modifications
- Unauthorized data storage or transmission
- Unauthorized system access to or disclosure of information
- Any acts that interrupt or result in a denial of service

Narrator: Major indicators of attempted collection include unauthorized attempts to access a system, receiving emails from foreign addresses, unauthorized or unplanned hardware or software modifications, unauthorized data storage or transmission, unauthorized system access to or disclosure of information, and any acts that interrupt or result in a denial of service.

Screen text: Select the Next button to continue.

Select “Countermeasures”

Suspicious Network Activities: Countermeasures

Screen 1 of 1

Screen text: Suspicious Network Activities
Countermeasures

- Develop and implement a Technology Control Plan (TCP)
- Conduct frequent computer audits
- Do not rely on firewalls to protect against all attacks
- Report intrusion attempts
- Avoid responding to or clicking on links from unknown sources and to report such items
- Disconnect computer system temporarily in the event of a severe attack

Narrator: Guarding against this type of collection attempt requires aggressive and continuous countermeasures. You should develop and implement a Technology Control Plan, or TCP. You must conduct audits at least weekly and optimally, daily instead of relying on firewalls for protection against all attacks. You must always report intrusion attempts, avoid responding to or clicking on links from unknown sources, and disconnect computer systems temporarily if there is a severe attack.

Screen text: Select the Next button to continue.

Screen text: Select the Next button to continue.

Foreign Collection Methods: Targeting at Conferences, Conventions, and Trade Shows Screen 5 of 8

Screen text: Targeting at Conferences, Conventions, and Trade Shows

- Techniques
- Targets
- Indicators
- Countermeasures

Select each collection component to learn more.

Narrator: This method of collection links the targeted programs and technologies with the knowledgeable personnel. Your personnel can be targeted at any conference, convention, or trade show – foreign or domestic.

Select “Techniques”

Targeting at Conferences, Conventions, and Trade Shows: Techniques Screen 1 of 1

Screen text: Targeting at Conferences, Conventions, and Trade Shows

Techniques

- Technical experts may receive invitations to share their knowledge
- Experts may be asked about restricted, proprietary, and classified information

Narrator: Technical experts may be contacted to share their expertise or asked to share restricted, proprietary, or classified information.

Screen text: Select the Next button to continue.

Select “Targets”

Targeting at Conferences, Conventions, and Trade Shows: Indicators Prior to event Screen 1 of 1

Screen text: Targeting at Conferences, Conventions, and Trade Shows

Targets

Indicators Prior to event

- Personnel receive an all-expenses-paid invitation to lecture in a foreign country
- Requests for a presentation summary or brief 6 – 12 months prior to the lecture date
- Host unsuccessfully attempted to visit facilities in the past
- Travel to event may pose targeting opportunities

Narrator: Experts may receive all-expense-paid invitations to lecture or requests for briefing materials many months in advance of scheduled presentations.

Screen text: Select the Next button to continue.

Select “Indicators”

Targeting at Conferences, Conventions, and Trade Shows: Indicators During an Event Screen 1 of 1

Screen text: Targeting at Conferences, Conventions, and Trade Shows
Indicators During an Event

- Excessive or suspicious photography and filming of technology and products
- Casual conversations during and after the event hinting at future contacts or relations

Narrator: During events, there may be excessive or suspicious photography or filming of technology and products, or casual conversation after the event suggesting future contacts or relationships.

More Examples button:

- Telephone monitoring and hotel room intrusions
- Conversations involving classified, sensitive, or export-controlled technologies
- Foreign attendees’ business cards do not match stated affiliations
- Attendees wear false name tags
- Individuals returning to same booth multiple times
- Detailed and probing questions about specific technology

Screen text: Select the Next button to continue.

Select “Countermeasures”

Targeting at Conferences, Conventions, and Trade Shows: Countermeasures Screen 1 of 1

Screen text: Targeting at Conferences, Conventions, and Trade Shows
Countermeasures

- Provide employees with detailed travel briefings concerning the threat, precautions to take, and how to react to elicitation
- Take mock-up displays instead of real equipment

More Examples button:

- Request a threat assessment from the program office
- Report intrusion attempts
- Restrict information provided to only what is necessary for travel and hotel accommodations
- Carefully consider whether equipment or software can be adequately protected
- Debrief attendees after the event to identify potential suspicious activity

Narrator: FSOs can provide employees with detailed travel briefings concerning the threat, precautions to take, and how to react to elicitation before the employees travel and debrief them upon their return. At the company level, you can plan what, when, where, and with whom you are sharing information. We can even take mock-ups to these events instead of the actual equipment.

Screen text: Select the Next button to continue.

Screen text: Select the Next button to continue.

Foreign Collection Methods: Foreign Visits Screen 6 of 8

Screen text: Foreign Visits

- Techniques
- Targets
- Indicators
- Countermeasures

Narrator: Foreign visits can result in the loss of technology or information or lay the ground work for targeting by other means by providing access to facilities and employees.

Screen text: Select each collection component to learn more.

Select “Techniques”

Foreign Visits: Technique Screen 1 of 1

Screen text: Foreign Visits

Techniques

- One-time visitors
- Long-term visitors
- Frequent visitors

Narrator: Attempts to access information or technology may occur at any time and may come from one-time visitors, long-term visitors such as exchange employees, or from frequent visitors such as foreign business associates.

Screen text: Select the Next button to continue.

Select “Targets”

Foreign Visits: Targets

Screen 1 of 1

Screen text: Foreign Visits

Targets

- Government, cleared, or commercial facilities

Narrator: This method may target government facilities, cleared facilities, and commercial facilities.

Screen text: Select the Next button to continue.

Select “Indicators”

Foreign Visits: Indicators

Screen 1 of 1

Screen text: Foreign Visits

Indicators

- Requests for information outside the scope of what was approved for discussion
- Individuals bringing cameras and/or video equipment into areas where no photographs are allowed

Narrator: Incidents may include the use of unauthorized devices, asking for information outside the scope of the visit, or bringing cameras or video equipment into areas where photographs are not permitted.

More Examples button:

- Hidden agendas associated with the stated purpose of the visit
- Visitors/students requesting information and then growing irate upon denial
- Wandering visitors using distractions to slip away
- New visitors added to group at last minute or switching of prescreened visitors

Screen text: Select the Next button to continue.

Select “Countermeasures”

Foreign Visits: Countermeasures

Screen 1 of 1

Screen text: Foreign Visits

Countermeasures

- Contractors may coordinate with Defense Security Service (DSS) prior to visit
- Prior to visit, brief hosts, and escorts on approved procedures
- Walk visitor route and identify vulnerabilities

- Prior to the visit, notify all employees about the visit, restrictions on the visitors, and the nature of the threat
- Debrief personnel in contact with visitors
- Ensure visitors do not bring recording devices, including cell phones, into the facility

Narrator: We can protect against unauthorized access by foreign visitors by doing some simple things prior to the visit. These include coordinating with DSS, briefing hosts and escorts on approved procedures, walk the visitor route and meeting areas to identify vulnerabilities, brief all employees about the nature of the threat from the foreign visitors and restrictions on the visitors, debrief personnel in contact with visitors, and ensure visitors don't bring recording devices into the facility.

Screen text: Select the Next button to continue.

Screen text: Select the Next button to continue.

Foreign Collection Methods: Solicitation and Seeking Employment Screen 7 of 8

Screen text: Solicitation and Seeking Employment

- Techniques
- Targets
- Indicators
- Countermeasures

Narrator: FIEs often attempt to develop business relationships in order to take advantage.

Screen text: Select each collection component to learn more

Solicitation and Seeking Employment: Techniques Screen 1 of 1

Screen text: Solicitation and Seeking Employment

Techniques

- Places adversary inside facility to collect information on desired technology
- Places foreign personnel in close proximity to cleared personnel
- Provides opportunity to build relationships that may be exploited

Narrator: The solicitation and seeking employment collection methods attempt to place foreign personnel in the facility with targeted information and technology. It also has foreign personnel working closely with cleared personnel so that personal relationships may be formed and possibly exploited.

Screen text: Select the Next button to continue.

Select "Targets"

Solicitation and Seeking Employment: Targets

Screen 1 of 1-

Screen text: Solicitation and Seeking Employment

Targets

- Joint ventures
- Research partnerships
- Internships

Narrator: FIEs using the solicitation and seeking employment collection method can participate in joint ventures or research partnerships, or internship programs for foreign students.

Screen text: Select the Next button to continue.

Select “Indicators”

Solicitation and Seeking Employment: Indicators Screen 1 of 1

Screen text: Solicitation and Seeking Employment

Indicators

- Foreign visitors request unrestricted facility access and access to networks or company personnel information
- Foreign visitors mail or transmit documents to a foreign embassy or foreign country

Narrator: Incidents may include foreign visitors requesting access to facilities, networks, or company personnel information, or mailing or transmitting documents to a foreign embassy or foreign country.

Screen text: Select the Next button to continue.

Select “Countermeasures”

Solicitation and Seeking Employment: Countermeasures Screen 1 of 1

Screen text: Solicitation and Seeking Employment

Countermeasures

- Develop a Technology Control Plan (TCP)
- Share the minimum amount of information appropriate to the scope of the joint venture/research
- Educate employees extensively on project scope and handling and reporting elicitation

More Examples button:

- Review all documents being faxed or mailed; use a translator, when necessary
- Provide foreign representatives with stand-alone computers
- Sustainment training

- Refuse to accept unnecessary foreign representatives into the facility

Narrator: We can protect against this collection method by having a TCP in place, sharing the minimum amount of information required for joint ventures or research partnerships, and educating company personnel on how to recognize and handle elicitation.

Screen text: Select the Next button to continue.

Foreign Collection Methods: Elicitation and Recruitment Screen 8 of 8

Screen text: Elicitation and Recruitment

- Techniques
- Targets
- Indicators
- Countermeasures

Select each collection component to learn more.

Narrator: FIE elicitation and recruitment is a covert, multiphase process.

Select “Techniques”

Elicitation and Recruitment: Techniques Screen 1 of 1

Screen text: Elicitation and Recruitment

Techniques

- Spot and Assess
- Develop a relationship
- Elicit or recruit

Narrator: FIEs will spot and assess an individual for potential recruitment, cultivate a relationship with the individual, and then either elicit information or recruit the individual.

Screen text: Select the Next button to continue.

Select “Targets”

Elicitation and Recruitment: Targets Screen 1 of 1

Screen text: Elicitation and Recruitment

Targets

- Anyone with current or potential access to desired information or technology

Narrator: FIEs are not necessarily looking for someone with a high level of access. Sometimes the potential for future access or the ability of the recruit to lead to other high value targets.

Trade shows, business contacts, social events, or online venues, such as chat rooms and social

media, are used for this process. During the Spot and Assessment phase, the FIE will often explore potential exploitable weaknesses that can be used against the individual.

Screen text: Select the Next button to continue.

Select “Indicators”

Elicitation and Recruitment: Indicators

Screen 1 of 1

Screen text: Elicitation and Recruitment

Indicators

- Requesting private meetings in areas away from work
- Making cover stories for their line of questioning
- Attempting to obtain personal information about you, your finances, or your family

Narrator: Once a potential target has been identified, adversaries begin to cultivate a relationship with that individual that includes meeting in private so they are less likely to be observed or reported. By the time the recruitment and handling phase is initiated, the individual is likely emotionally tied to the adversary. Elicitation is the strategic use of conversation to subtly extract information about you, your work, and your colleagues. Foreign intelligence entities elicit information using both direct and indirect questioning. They may create a cover story to explain the line of questioning in their attempts to make the discussion less suspicious.

Screen text: Select the Next button to continue.

Select “Countermeasures”

Elicitation and Recruitment: Countermeasures

Screen 1 of 1

Screen text: Elicitation and Recruitment

Countermeasures

Voice bubble: I don’t know, maybe you should...

Narrator: Do not share anything the elicitor or recruiter is not authorized to know, including personal information about yourself, your family, or your co-workers. What can you do if you believe that someone is attempting to elicit information from you?

Screen text: Elicitation and Recruitment

Countermeasures

- Change the topic
- Refer them to public websites
- Deflect the question
- Provide a vague answer
- Feign ignorance and ask the elicitor to explain what they know

You can change the topic, refer them to public websites, deflect the question, provide a vague answer, or feign ignorance and ask the elicitor to explain what they know.

Screen text: Select the Next button to continue.

Screen text: Select the Next button to continue.

Select “DSS CI Agent” (phone)

Identifying Threats

The Role of DSS Counterintelligence Directorate in CI and Threat Awareness

Screen 1 of 2

Screen text:

- Provides CI functional services and support to cleared industry

Narrator: The DSS Counterintelligence Directorate provides CI functional services to cleared industry and is a key resource for your company.

Screen text:

- Provides CI functional services and support to cleared industry
- Provides early detection and referral of potential espionage, technology transfer, trade secret theft and other matters to applicable intelligence, counterintelligence, and/or law enforcement entities.

Narrator: The DSS CI Directorate provides early detection and referral of potential espionage, technology transfer, trade secret theft, and other matters to applicable intelligence, counterintelligence, and/or law enforcement entities.

Screen text:

- Provides CI functional services and support to cleared industry
- Provides early detection and referral of potential espionage, technology transfer, trade secret theft and other matters to applicable intelligence, counterintelligence, and/or law enforcement entities.
- These entities may also assist industry in the recognition and reporting of collection attempts by FIEs

Narrator: These entities may also assist industry in the recognition and reporting of collection attempts by foreign intelligence entities or FIEs.

Screen text:

- Provides CI functional services and support to cleared industry
- Provides early detection and referral of potential espionage, technology transfer, trade secret theft and other matters to applicable intelligence, counterintelligence, and/or law enforcement entities.
- These entities may also assist industry in the recognition and reporting of collection attempts by FIEs

- Publishes and makes threat information available to industry annually
- Advises and assists with developing and implementing countermeasures

Narrator: The DSS CI Directorate also publishes threat information annually and makes it available to industry, and advises and assists industry partners in the development and implementation of countermeasures.

Screen text: Select the Next button to continue.

DSS Resources Available to the FSO

Screen 2 of 2

Narrator: Having a CI strategy requires you to understand the sensitive and classified information, technology, and systems that need to be protected within your facility, and the sources and nature of threats to your facility.

DSS has several resources available that outline threats to cleared industry.

Screen text: Targeting U.S. Technologies Report

- Special Focus Areas
- Region
- Methods of Operation
- Technology

Narrator: The main one is an annual publication, Targeting U.S. Technologies. This report consolidates and presents the threat information DSS learned over the past year, organized in various ways—to include by special focus areas, by region, by methods of operation, and by technology. Remember to update these resources in your handbook.

Screen text: Targeting U.S. Technologies Report

- Special Focus Areas
- Region
- Methods of Operation
- Technology

DSS CI Special Agent

- Provide specific information about threats to your facility

Narrator: Each facility also has an assigned DSS CI Special Agent. Your CI Special Agent can provide specific, even classified information, about threats to your facility.

Screen text: Targeting U.S. Technologies Report

- Special Focus Areas
- Region
- Methods of Operation
- Technology

DSS CI Special Agent

- Provide specific information about threats to your facility

Industrial Security Representative

- Provide oversight and assistance as needed

Narrator: Finally, you can always reach out to your facility's Industrial Security Representative, or IS Rep, for assistance. IS Reps provide oversight and assistance to cleared contractor facilities in ensuring the protection of national security information.

Button: "2017 CI Trends Report"

Narrator: DSS's ability to provide accurate threat information depends on the information that industry reports about the suspicious contacts and activities that your facility and personnel experience.

Select "2017 CI Trends Report"

Hyperlinks to an external webpage.

Knowledge Check

Screen 2 of 6

Question: Which of the following are foreign collection methods?

Select all that apply; then select Submit.

- Requests for information
- Solicitation and marketing
- Seeking employment
- Foreign visits
- Abduction and interrogation

Knowledge Check

Screen 3 of 6

Question: Match corresponding activities with its foreign collection methods.

List of Foreign Collection Methods

- Requests for Information
- Academic Solicitation
- Elicitation and Recruitment
- Solicitation and seeking employment
- Foreign visit

List of Activities

- May use joint ventures or research partnerships
- Unsolicited and direct requests often submitted via email

Application to degree programs associated with cleared facilities or programs
Experts may receive all-expense-paid invitations to lecture
Exchange employees or foreign business associates

Knowledge Check

Screen 4 of 6

Question: Match potential countermeasures with foreign collection methods.

List of Potential Countermeasures

- Suspicious network activities
- Conferences, Conventions, and Trade Shows
- Foreign Visits
- Solicitation and Seeking Employment

List of Potential Countermeasures

- Conduct Audits at least weekly
- Use mock-ups instead of actual equipment
- Brief hosts and escorts on approved procedures
- Share the minimum amount of information appropriate to the scope of venture

Knowledge Check

Screen 5 of 6

Question: You decide that you need three specific types of information for the training session that you are planning. Match the information that you need with the source from which you can obtain the information:

List of Source Documents

- Federal Bureau of Investigations
- State or Local Law Enforcement
- DSS CI Directorate
- Government Contracting Agency

List of Information Types

- Trends related to what is targeted and methods used
- Threat assessment for your current contract
- Identify the current national security concerns that may affect your facility
- Determine the types of crimes that are being committed at facilities close to your company

Lesson Summary

Screen 6 of 6

Screen text: Counterintelligence Integration Plan

Today's objectives

- Identified key sources of threat information
- Identified the role of DSS in CI and threat awareness
- Gave examples of types of threats
- Identified employee vulnerability to targeting by foreign intelligence entities
- Recognized common methods of operation used for collecting information and associated countermeasures

Narrator: You've just finished your research for today. Now, you are familiar with sources of threat information and the role of DSS in CI and threat awareness. You should also be able to give examples of types of threats, identify employees who are vulnerable to targeting, and recognize common methods FIEs use to collect information and associated countermeasures.

Screen text: FSO HANDBOOK

DSS resources available to industry

- DSS CI Special Agent
- Industrial Security Representative
- Targeting U.S. Technologies Report

Sources of Threat Information for use in your CI program

- Government Contracting Agency
- DSS CI Directorate
- FBI
- Other Federal, State, and local Agencies
- Open Sources

Types of Threats to Industry

- Insider Threats
- Threats from FIEs
- Terrorist Organizations
- Criminal Activities
- Business Competitors

Provide awareness training on foreign collection methods and associated countermeasures

- Requests for information
- Academic solicitation suspicious network activity
- Targeting at trade shows
- Solicitation and marketing
- Seeking employment
- Foreign visits
- Elicitation

Download button; to be selected should the student want a hard copy of this information.

Narrator: Let's have a look at what information you have collected for your CI Integration Plan.

Screen 2 of 2

Select: Countermeasures and Threat Reporting

Countermeasures and Threat Reporting

Introduction to Countermeasures and Threat Reporting

Screen 1 of 4

Screen text: Counterintelligence Integration Plan

Today's objectives

- Define countermeasures

- Identify employee vulnerability to targeting by foreign intelligence entities

- Identify the purpose of foreign travel and foreign visit programs

- Describe CI training requirements for industry

- Explain counterintelligence and threat information reporting requirements

Narrator: There are some final elements required to finalize your CI Integration plan. You learned about countermeasures that can be applied to each method of operation. In this lesson, we will explore detailed countermeasure efforts, and learn about the two pillars of counterintelligence programs: awareness and reporting. Please review the objectives.

Selectable buttons: Countermeasures, Foreign Travel and Visits, CI Training, and CI Reporting Requirements

Narrator: Resources for today's research are located on your desktop. Select each resource to learn more.

Screen text: Select each resource to begin your familiarization with identifying threats.

Select "Countermeasures"

Countermeasures

Screen 1 of 1

Screen text: Countermeasures

The employment of devices or techniques that impair the operational effectiveness of enemy activity. Countermeasures may include anything that effectively negates an adversary's ability to exploit vulnerabilities.

Narrator: As we learned in the last lesson, Countermeasures are the employment of devices or techniques that impair the operational effectiveness of enemy activity. Countermeasures may include anything that effectively negates an adversary's ability to exploit vulnerabilities.

Screen text: Countermeasures

The employment of devices or techniques that impair the operational effectiveness of enemy activity. Countermeasures may include anything that effectively negates an adversary's ability to exploit vulnerabilities.

Purpose

Narrator: The purpose of countermeasures is to adjust the behavior of potential FIEs so that they do not pose a threat to your company.

Screen text: Countermeasures

The employment of devices or techniques that impair the operational effectiveness of enemy activity. Countermeasures may include anything that effectively negates an adversary's ability to exploit vulnerabilities.

Purpose

Deter, identify, and deny access to FIEs
Make the environment unsuitable for inappropriate, criminal, or terroristic behavior
Mitigate hazards and threats

Narrator: Countermeasures attempt to deter, identify, and deny access to employees, information, and technology by FIEs. Countermeasures also attempt to make the environment suitable for appropriate behavior, unsuitable for inappropriate, criminal, or terroristic behavior, and mitigate the actions of both hazards and threats.

Screen text: Countermeasures

The employment of devices or techniques that impair the operational effectiveness of enemy activity. Countermeasures may include anything that effectively negates an adversary's ability to exploit vulnerabilities.

Purpose

Deter, identify, and deny access to FIEs
Make the environment unsuitable for inappropriate, criminal, or terroristic behavior
Mitigate hazards and threats

Strategies for the implementation

Train employees to recognize and report potential threats
Control access to the target
Deter FIEs from acting
Delay the progress of any FIE into or out of the facility
Respond to any active threat action
Create an environment where people feel safe and secure and can focus on the company's goals
Design programs to mitigate possible harm from hazards and FIEs

Narrator: Here are some strategies for the implementation of countermeasures in your CI awareness program.

Select the Next button to continue.

Select “Foreign Travel and Visits”

Employee Vulnerability to Targeting by Foreign Intelligence Entities

Screen 1 of 3

Narrator: Your employees must understand that a single piece of information - classified or not - may not be of critical importance alone, but when put together with other pieces of information, may reveal sensitive, or even classified, information.

Screen text: Classified information
Controlled unclassified information
Business proprietary information
Intellectual property

Narrator: For this reason, employees need to protect not only classified information, but also controlled unclassified information, business proprietary information, and intellectual property. The loss of *any* of these directly impacts your company’s economic viability and potentially the nation’s security.

We need to know who these employee groups are, so you can make them aware of potential contact from adversaries. The better prepared they are, the lower the chance of compromising your facility’s sensitive information.

Screen text: Classified information
Controlled unclassified information
Business proprietary information
Intellectual property

Vulnerable Groups
Human Resources
Information Technology
Business Development
Research and Development
Manufacturing
Purchasing
Facility Management
Employees traveling abroad

Narrator: Some groups are more vulnerable to targeting than others. These groups include human resources, information technology, business development, research and development, manufacturing, purchasing, facility management, and employees traveling abroad.

Screen text: Select each group to learn more.

Narrator: Let’s talk about each of these groups individually.

Select “Human Resources”

Human Resources

Screen 1 of 1

Screen text: Human Resources

- Targets because of access to personnel information and role in the hiring process

Narrator: Human resources personnel are the gateway to your facility. They are appealing targets for adversaries because of their access to personnel information *and* because they play an important role in the hiring process.

Screen text: Human Resources

- Targets because of access to personnel information and role in the hiring process
- Asset for CI Program because of access to personnel information

Narrator: HR personnel can be an important part of your CI program. Their access to personnel information equips them to recognize targeting via academic solicitation and seeking employment.

Select the Next button to continue.

Select “Information Technology”

Information Technology

Screen 1 of 1

Screen text: Information Technology

Narrator: IT personnel are the electronic gatekeepers for your facility.

Screen text: Information Technology

- Targets because of access to the facility’s network and information systems

Narrator: They are appealing targets for adversaries because of their access to the facility’s network and information systems where critical information resides.

Screen text: Information Technology

- Targets because of access to the facility’s network and information systems
- Asset for CI Program because of their ability to spot cyber attacks

Narrator: IT personnel can be central to your CI program. Their access to system and network activity equips them to notice anomalies and spot cyber attacks.

Select the Next button to continue.

Select “Business Development”

Business Development

Screen 1 of 1

Screen text: Business Development

- Targets because of access to your sensitive and proprietary information and role in choosing business associates

Narrator: Business development personnel are appealing targets because of their access to your sensitive and proprietary information and because they play a key role in determining with whom you do business.

Screen text: Business Development

- Targets because of access to your sensitive and proprietary information and role in choosing business associates
- Asset for CI Program because of their ability to help identify potential targeting early

Narrator: Business development personnel are important to your CI program. Their access to the people seeking to do business with your company enables them to help identify potential targeting early and identify what is being targeted.

Select the Next button to continue.

Select “Research and Development”

Research and Development

Screen 1 of 1

Screen text: Research and Development

- Targets because of knowledge and access to critical technology assets including blueprints, diagrams, and other technical information

Narrator: Engineers and research and development personnel are targets due to their knowledge of and access to critical technology assets including blueprints, diagrams, and other technical information.

Screen text: Research and Development

- Targets because of knowledge and access to critical technology assets including blueprints, diagrams, and other technical information
- Asset for CI Program because of their ability to identify what is being targeted

Narrator: This group can identify specific information being targeted based on the inquiries and solicitations they receive.

Select the Next button to continue.

Select “Manufacturing”

Manufacturing

Screen 1 of 1

Screen text: Manufacturing

- Targets because of access to the facility and its technology, processes, and end products

Narrator: Manufacturing and direct labor personnel are targets because of their access to the facility and its technology, processes, and end products.

Screen text: Manufacturing

- Targets because of access to the facility and its technology, processes, and end products
- Asset for CI Program because they are likely to be targeted and can provide insight to collection methods

Narrator: This group can identify specific assets being targeted and help identify methods of operations used.

Select the Next button to continue.

Select “Purchasing”

Purchasing Screen 1 of 1

Screen text: Purchasing

- Targets because of access to the company’s supply chain

Narrator: Individuals working in purchasing are targets because of their access to the company’s supply chain.

Screen text: Purchasing

- Targets because of access to the company’s supply chain
- Asset for CI Program because they are likely to be targeted and can provide insight to collection methods

Narrator: Purchasing personnel can support the CI Program by identifying and reporting suspicious interactions with vendors.

Select the Next button to continue.

Select “Facility Management”

Facility Management Screen 1 of 1

Screen text: Facility Management

- Targets because of access to the physical facility, information, technology, and personnel

Narrator: Facilities management personnel are appealing targets because of their physical access to your facility and all of the information, technology, and personnel within it.

Screen text: Facility Management

- Targets because of access to the physical facility, information, technology, and personnel
- Asset for CI Program because they can observe and report suspicious behavior or activities of employees and visitors

Narrator: This group is also an asset to the CI Program because they are uniquely positioned to observe the movement in, out, and between facilities by employees and visitors.

Select the Next button to continue

Select “Employees traveling abroad”

Employees traveling abroad

Screen 1 of 1

Screen text: Employees traveling abroad

Employees traveling abroad or attending trade shows, conventions, and seminars at home or overseas

- Targets because of access to sensitive company information

Narrator: Employees have access to sensitive company information and are targeted for this information when they travel abroad or when they represent your company at trade shows, conventions, and seminars.

Screen text: Employees traveling abroad

Employees traveling abroad or attending trade shows, conventions, and seminars at home or overseas

- Targets because of access to sensitive company information
- Asset for CI Program because they can provide insight into how foreign operatives are targeting U.S. personnel

Narrator: You must educate all employees on the risks associated with foreign travel and provide them with a foreign travel briefing before they go to increase their awareness of potential targeting and to provide information on current travel warnings and alerts.

When an employee returns from foreign travel, you must conduct a foreign travel debrief. This is an opportunity to gather information and determine if your personnel were targeted and if so, how they were targeted. Information indicative of targeting should be reported as a suspicious contact. It can also provide information that helps you prepare for future travel.

Employees participating in trade shows, conventions and seminars should also be briefed prior to and after attending such events to increase awareness of risk and encourage reporting of suspicious activity.

Select the Next button to continue.

Screen text: Classified information

Controlled unclassified information

Business proprietary information

Intellectual property

Vulnerable Groups

Human Resources

Information Technology
Business Development
Research and Development
Manufacturing
Purchasing
Facility Management
Employees traveling abroad

Pop-up box text: You can learn specific information about CI foreign travel briefings in the DSS web-based training Short CI Foreign Travel Briefing.

Foreign Travel Screen 2 of 3

Narrator: As discussed, though employees may be targeted at any time or place, FIEs have greater access to employees during foreign travel and employees are most vulnerable during transit.

Screen text: Foreign Travel Program

- Prepare travelers for events they may encounter
- Arm travelers with strategies to handle events

Narrator: Organizations should establish a Foreign Travel Program and standard operating procedures that require employees to report both official and personal foreign travel.

The purpose of a Foreign Travel Program is to prepare travelers for events they may encounter and arm them with the strategies needed to handle these events.

Added screen text: Foreign Travel Briefing

Narrator: FSOs should provide education briefings prior to travel and require employees to participate in a security debrief upon completion of foreign travel.

Screen text: Foreign Travel Program

- Prepare travelers for events they may encounter
- Arm travelers with strategies to handle events

Foreign Travel Briefing

- Vulnerability awareness
- Personal safety
- Terrorist threat
- Assistance contacts

Narrator: Foreign travel briefings increase the traveler's awareness of potential targeting by FIEs and personal safety needs while traveling internationally, provides information on current travel warnings and alerts, and provides travelers information about where to seek assistance while traveling abroad.

Screen text: Foreign Travel Program

- Prepare travelers for events they may encounter
- Arm travelers with strategies to handle events

Foreign Travel Briefing

- Vulnerability awareness
- Personal safety
- Terrorist threat
- Assistance contacts

Foreign Travel Debriefing may cover:

- Countries and dates visited
- Irregularities at port of entry
- Gifts or provisions received
- Foreign inquiries
- Requests received
- Unexpected or unusual events
- Suspicious foreign contacts
- Other info

Narrator: When personnel return from foreign travel, you will conduct a debrief session with them. The purpose of the debrief is to determine if anything happened during the trip that raises concern for the traveler or for the organization. Depending upon the purpose and destination of the travel, this debrief may be as informal as a questionnaire or as formal as an interview.

Select the Next button to continue.

Foreign Visits

Screen 3 of 3

Narrator: International visits with cleared contractors are a common part of everyday business in today's global economy. We must acknowledge the associated potential counterintelligence vulnerabilities to ensure that the requirements of the National Industrial Security Program Operating Manual or NISPOM are followed.

Screen text: Foreign delegation visits to cleared contractors are one of the most frequent methods of operation used to target the U.S. defense industry.

Narrator: Inform your DSS industrial security representative or DSS CI agent in advance of foreign visits. Given adequate time, your agent can assist with identifying the risk to the cleared company.

Establish a Technology Control Plan, or TCP, that identifies procedures for restrictions of any Foreign Liaison Officers or long-term visitors with access to the facility.

Screen text: Foreign delegation visits to cleared contractors are one of the most frequent methods of operation used to target the U.S. defense industry.

Foreign Visit Program Awareness

- Wandering visitors
- Irregular questions
- Asking same questions of several contractors
- Agenda changes
- Visitor attitude when questions are not answered

Narrator: When a foreign visit occurs at your facility, awareness is essential to prevention.

Watch for wandering visitors, questions that are not associated with the purpose of the visit, visitors asking the same question of multiple contractors, visitors switching agenda topics or questions or visitors becoming distraught when irregular questions are not answered.

Remember that even if an appropriate authority grants a foreign visitor access to classified U.S. information, that visitor is NOT entitled to classified information unless he/she has a direct need to know that has been communicated and verified in advance of the visit.

Here are some elements of an effective foreign visit program.

Screen text: Foreign delegation visits to cleared contractors are one of the most frequent methods of operation used to target the U.S. defense industry.

Foreign Visit Program Awareness

- Wandering visitors
- Irregular questions
- Asking same questions of several contractors
- Agenda changes
- Visitor attitude when questions are not answered

Elements of an effective foreign visit program:

- Pre-visit: Education program for escorts, briefers, and hosts that educates on responsibilities
- Post-visit: Debriefing program that solicits responses from escorts, briefers, and hosts on reportable incidents
- Verification of visitors' identities
- Identification and reporting of anomalies related to foreign visits
- Technology Control Plan (TCP) includes procedures for restrictions of any Foreign Liaison Officers or long-term visitors with access to the facility

Select the Next button to continue.

Select "CI Training"

CI Training

Screen 1 of 1

Screen text: Chapter 3

Counterintelligence Training

- Follow NISPOM initial and annual training requirements

Narrator: NISPOM, chapter 3, requires contractors to provide all cleared employees with security training and briefings commensurate with their involvement with classified information to include initial and annual refresher training.

NISPOM 1-300 requires contractors to establish internal procedures to ensure that cleared employees are aware of their responsibilities for reporting pertinent information.

FSOs must use facility standard operating procedures or SOPs, initial, and recurring training to ensure that employees are aware of and follow reporting procedures.

Screen text: Chapter 3

Counterintelligence Training

- Follow NISPOM initial and annual training requirements
- Establish company SOPs

Narrator: Your company should also establish standard operating procedures to address responsibilities and company requirements.

Screen text: Chapter 3

Counterintelligence Training

- Follow NISPOM initial and annual training requirements
- Establish company SOPs
- Use DSS resources

Narrator: DSS and the CSA provide defensive security, threat awareness, and other education and training information for contractors to use in their CI awareness training.

Screen text: Chapter 3

Counterintelligence Training

- Follow NISPOM initial and annual training requirements
- Establish company SOPs
- Use DSS resources

FSO Counterintelligence Training

Narrator: As an FSO, you are responsible for providing CI and threat awareness training at your facility. Engaging in certain activities, on a regular basis, will help you do this effectively.

Screen text: Chapter 3

Counterintelligence Training

- Follow NISPOM initial and annual training requirements
- Establish company SOPs

- Use DSS resources

FSO Counterintelligence Training

- Initial and annual training

Narrator: First, you must adhere to initial and annual training requirements. Ensuring employees receive security and CI training helps protect your facility and national security. But having an effective CI awareness program involves more than just annual CI briefings.

Screen text: Chapter 3

Counterintelligence Training

- Follow NISPOM initial and annual training requirements
- Establish company SOPs
- Use DSS resources

FSO Counterintelligence Training

- Initial and annual training
- Vigilance campaign
- Share security and threat awareness information
- Ensure that employees apply security and threat awareness concepts

Narrator: You should implement an ongoing campaign to help employees maintain vigilance against the threat posed by FIEs. This “vigilance campaign” should be tailored for situations common to your company employees, use a variety of communication methods, highlight key CI concepts, and reinforce reporting requirements and points of contact.

Narrator: You can be creative in selecting ways to enhance messaging and awareness.

Screen text: Monthly Activities (on the right of the screen)

- Contests
- Games
- Videos

Narrator: Monthly activities such as contests to create a new awareness poster, playing CI Awareness Trivial Twirl, or watching relevant videos will engage employees and stimulate their awareness.

Screen text: Monthly Activities (on the right of the screen)

- Contests
- Games
- Videos

CI Awareness Week

- Guest speakers
- Leadership
- Briefings

Narrator: You can establish a CI awareness week and have guest speakers from DSS or other agencies to provide updates on current threats and methods, have company leadership emphasize company SOPs, and provide informational briefings.

Screen text: Monthly Activities (on the right of the screen)

- Contests
- Games
- Videos

CI Awareness Week

- Guest speakers
- Leadership
- Briefings

Visual awareness reminders

- Posters
- Flyers
- Post-its

Narrator: Placing visual reminders prominently throughout the facility is another way to promote awareness. Posters from your monthly contest and from DSS, flyers for offices or cubicles and short reminders on post-its are ways to keep CI awareness in front of employees.

Screen text: Monthly Activities (on the right of the screen)

- Contests
- Games
- Videos

CI Awareness Week

- Guest speakers
- Leadership
- Briefings

Visual awareness reminders

- Posters
- Flyers
- Post-its

Social media

- Company website
- Company Facebook page or Twitter

Narrator: You can also use your company's website and social media such as the company's Facebook or Twitter to send out short awareness messages.

Screen text added to existing screen text: Counterintelligence Toolkit button

Narrator: CDSE’s Counterintelligence Toolkit has resources that can be used to help develop a “Vigilance” mindset within your company.

Finally, you must maintain records of training provided and employee participation. This requirement may be satisfied by use of distribution lists, facility or department-wide newsletters, or other means identified in your company SOPs.

Vigilance campaign button:

Hyperlinks to <https://www.cdse.edu/toolkits/insider/vigilance.html>

Counterintelligence Awareness Toolkit button:

Hyperlinks to <https://www.cdse.edu/toolkits/ci/index.php>

Screen text: Select the Next button to continue.

Select “CI Reporting and Requirements”

Reporting Requirements

Screen 1 of 5

Narrator: Your personnel are the first line of defense against threats. Everyone must be vigilant and report any incident or behavior that may be relate to a potential compromise of sensitive unclassified or classified information.

So, what must be reported and to whom?

Screen text: NISPOM

Employees of cleared industry must report to the FSO all events that:

- Impact on the status of the facility clearance
- Impact the status of an employee’s personnel security clearance
- Affect proper safeguarding of classified information
- Indicate classified information was lost or compromised

(NISPOM 1-300)

Narrator: The National Industrial Security Program Operating Manual or NISPOM requires employees of cleared industry to report events that impact the status of the facility clearance, impact the status of an employee’s personnel security clearance, affect proper safeguarding of classified information, or indicates that classified information was lost or compromised. These threats are reported to the FSO.

Screen text added: FSO Report to DSS

- Adverse information
- Suspicious contacts
- Security violations (selectable button)

(NISPOM 1-302a & b)

Narrator: Depending on the situation, FSOs must report the possible threat to the DSS which is the Cognizant Security Agency or CSA, via your DSS Industrial Security Representative, or DSS Counterintelligence Special Agent.

Screen text added: Report to FBI and DSS

- Actual, probable, or possible espionage, sabotage, terrorism, or subversive activities
(NISPOM 1-301)

Narrator: FSOs are required to report information concerning actual, probable, or possible espionage, sabotage, terrorism, or subversive activities to the FBI and DSS. Initial reports to the FBI can be made by phone but must be followed up with a written report. Remember that although 1-301 espionage reports go immediately to the FBI, the DSS (or the CSA) must also be informed.

Select “Security violations”

Screen text added: Security Violation: Failure to comply with the policy and procedures established by this Manual that reasonably could result in the loss or compromise of classified information.

Screen text: Select the Next button to continue.

Reporting Requirements (cont.)

Screen 2 of 5

Screen text: NISPOM 1-300

Contractor internal procedures

Narrator: NISPOM 1-300 requires contractors to establish internal procedures to ensure that cleared employees are aware of their responsibilities for reporting pertinent information.

Added screen text:

- Standard operating procedures
- Reporting requirements

Narrator: FSOs must use facility standard operating procedures, a threat vigilance campaign, and training to ensure that employees are aware of and follow reporting procedures.

FSOs must use their vigilance campaign, recurring training, and travel briefings to stress how critical it is for everyone in the facility to report all suspicious activity or contacts they observe.

It is important for employees to know that reporting does not reflect negatively on their facility. In fact, DSS expects companies, especially those in certain industries, to report suspicious activity, and to report often!

The best way to defeat the threat is to report the threat.

Added screen text: Reporting helps:

- Identify the larger threat picture

- Provide information to use in developing countermeasures

Narrator: Reporting helps to identify the larger threat across cleared facilities and enables industry to use that information to develop countermeasures.

The reporting process works like this.

When our facility submits a report, DSS evaluates, screens, and analyzes it. By analyzing all of the reports gathered from industry over time, DSS is able to develop current, specific threat information. DSS then provides this consolidated information *back* to industry, which better equips companies to develop appropriate countermeasures to address new and emerging threats.

Screen text: Select the Next button to continue.

Adverse Information: Adjudicative Guidelines

Screen 3 of 5

Screen text: NISPOM 1-302a

Narrator: NISPOM 1-302a requires contractors to report any adverse information relating to cleared employees to DSS.

Added screen text: Adverse information includes behavior that:

- Negatively reflects on integrity or character
- Suggests ability to safeguard classified information may be compromised
- Indicates access to classified information is not in the interest of national security

Narrator: Adverse information is any information that negatively reflects on the integrity or character of a cleared employee, that suggests a cleared employee's ability to safeguard classified information may be impaired, or that a cleared employee's access to classified information clearly may not be in the interest of national security.

Screen text: SEAD 4

- Guideline A: Allegiance to the United States
- Guideline B: Foreign Influence
- Guideline C: Foreign Preference
- Guideline D: Sexual Behavior
- Guideline E: Personal Conduct
- Guideline F: Financial Considerations
- Guideline G: Alcohol Consumption
- Guideline H: Drug Involvement and Substance Misuse
- Guideline I: Psychological Conditions
- Guideline J: Criminal Conduct
- Guideline K: Handling Protected Information
- Guideline L: Outside Activities
- Guideline M: Use of Information Technology

Narrator: Adverse information may impact the status of a cleared employee's personnel security clearance and is evaluated according to the 13 adjudicative guidelines contained in Security Executive Agent Directive 4 or SEAD 4. This directive establishes the common adjudicative criteria for all covered individuals who require initial or continued eligibility for access to classified information or eligibility to hold a sensitive position.

We must report any information regarding your own or others' behavior that is not consistent with, or that violates, the 13 adjudicative guidelines.

The behaviors identified in the 13 adjudicative guidelines raise doubts about an individual's reliability, trustworthiness, and judgment in protecting national security.

Select the Next button to continue.

Reportable Adverse Information **Screen 4 of 5**

Screen text: Examples of behavior and activities to be reported

- Mishandling classified information
- Misuse of computer systems
- Suspicious cyber incidents
- Foreign influence
- Suspicious contacts
- Suspicious financial activity
- Unauthorized use of recording devices

Select each type of incident to learn more.

Narration: Now, let's consider specific incidents that must be reported. These include mishandling classified information, misuse of computer systems, suspicious cyber incidents, foreign influence, suspicious contacts, suspicious financial activities, and the unauthorized use of recording devices.

Take a moment to review examples of these incidents. Remember, you might encounter signs or actions not listed here. When in doubt, always err on the side of caution and report the incident.

Select "Mishandling classified information"

Mishandling classified information **Screen 1 of 1**

Screen text: Mishandling of classified information

- Removing or sending classified material out of secured areas without proper authorization
- Unauthorized copying, printing, faxing, emailing, or transmitting classified material
- Transmitting or transporting classified information by unsecured or unauthorized means
- Unauthorized storage of classified material, including storage at home

- Reading or discussing classified information in an unauthorized area or over a non-secure communication device
- Improperly removing or changing classification markings
- Attempting to expand access to classified information by volunteering for assignments or duties beyond the normal scope of responsibilities

Narrator: Mishandling classified information includes attempting to gain access to classified information without a need to know, unauthorized removal, copying, or transmittal of classified information.

Screen text: Select the Next button to continue.

Select “Misuse of computer systems”

Misuse of computer systems

Screen 1 of 1

Screen text: Misuse of computer systems

- Unauthorized network access
- Unauthorized email traffic to foreign destinations
- Password cracking, key logging, encryption, steganography, privilege escalation, and account masquerading
- Use of DoD account credentials by unauthorized parties
- Unexplained storage of encrypted data
- Network spillage incidents or information compromise
- Unauthorized transmissions of classified or controlled unclassified information
- Data exported to unauthorized domains affecting classified information, systems or cleared individuals
- Actual or attempted unauthorized access into U.S. automated information systems
- Tampering with or introducing unauthorized elements into information systems
- Unexplained user accounts, administrator accounts, and expansion of network privileges

Narrator: Misuse of computer systems includes unauthorized access to classified networks or files, attempts to access someone’s login credentials, data spills, unauthorized data transmission, and any introduction of unauthorized elements into information systems.

Select the Next button to continue.

Select “Suspicious cyber incidents”

Suspicious cyber incidents

Screen 1 of 1

Screen text: Suspicious cyber incidents

- Advanced techniques and/or advanced evasion techniques, which imply a sophisticated adversary
- Pre-intrusion aggressive port scanning

- Denial-of-service attacks or suspicious network communication failures
- Social engineering, electronic elicitation, email spoofing, spear phishing, whale phishing, or direct questioning, such as through social networking sites
- Malicious codes or blended threats such as viruses, worms, trojans, logic bombs, malware, spyware, or browser hijackers, especially those used for clandestine data exfiltration
- Any credible anomaly, finding, observation, or indicator associated with other activity or behavior that may also be an indicator of terrorism or espionage
- Any cyber activity linked to law enforcement or counterintelligence suspicious indicators provided by the FBI, DSS, Defense Intelligence Agency or by any other cyber centers

Narrator: Suspicious cyber incidents involve malicious codes or blended threats such as viruses, worms, trojans, logic bombs, malware, spyware, or browser hijackers or engineering, electronic elicitation, email spoofing, spear phishing, whale phishing, or direct questioning, such as through social networking sites.

Select the Next button to continue.

Select “Foreign influence”

Foreign influence

Screen 1 of 1

Screen text: Foreign Influence

- Undisclosed visits to foreign diplomatic facilities
- Trips to foreign countries inconsistent with an individual’s financial ability
- Foreign entities targeting employees traveling overseas via airport screening or hotel room incursions

Narrator: Foreign influence might involve unreported close and continuing contact with a foreign national, including intimate contacts, shared living quarters, or marriage.

Select the Next button to continue.

Select “Suspicious contacts”

Suspicious contacts

Screen 1 of 1

Screen text: Suspicious Contacts

- Requests for information that make an individual suspicious, including questionable contacts or interaction

Narrator: NISPOM defines suspicious contacts as efforts by any person, regardless of their nationality, to obtain illegal or unauthorized access to classified information or to compromise a cleared employee, contacts by cleared employees with known or suspected intelligence officers from any country, or any contact which suggests a cleared employee may be the target of an attempted exploitation by an FIE.

Screen text: Select the Next button to continue.

Select “Suspicious financial activity”

Suspicious financial activity

Screen 1 of 1

Screen text: Concerning financial activity

- Unexplained expensive purchases not reasonably supported by the individual’s income
- Sudden unexplained reversal of a negative financial situation or repayment of large debts

Narrator: Concerning financial activity might include unexplained expensive purchases not reasonably supported by the individual’s income or sudden unexplained reversal of a negative financial situation or repayment of large debts.

Question 1 of 4

Which of the following activities can you use to promote CI awareness within your facility?

Select all that apply; then select Submit.

- Enlist your DSS CI Special Agent to brief employees
- Post CI-related material throughout the workplace
- Share actual targeting examples with employees
- Remind employees that anyone who appears “foreign” is a threat

Question 2 of 4

Foreign travel increases the risk of FIE targeting.

Select the best answer; then select Submit.

- True
- False

Question 3 of 4

The National Industrial Security Program Operating Manual (NISPOM) requires employees of cleared industry to report which of the following events?

Select all that apply; then select Submit.

- Suspicious contacts
- Lost or compromised classified information
- Actions/events that may affect the status of an employee’s personnel security clearance
- Actions/events that may affect the status of the facility’s clearance
- Actual, probable, or possible espionage, sabotage, terrorism, of subversive activities

Question 4 of 4

Which of the following groups are vulnerable to foreign intelligence entity targeting?

Select all that apply; then select Submit.

- Information technology
- Facility management
- Employees traveling abroad
- Administrative assistants

Select the Next button to continue.

Knowledge Check
Screen 3 of 4

You learn from a security bulletin that a foreign country is using university students applying for low level jobs to gain entry into companies in your industry. Which group might you alert first?

- Human Resources
- Information Technology
- Business Development
- Engineers and Research & Development

Foreign entities stepped up attempts to purchase export-controlled technology, including technology your facility develops. Who should you alert?

- Human Resources
- Information Technology
- Business Development
- Engineers and Research & Development

You learn of a threat from a business competitor to steal blueprints and schematics. Which group might you alert first?

- Human Resources
- Information Technology
- Business Development
- Engineers and Research & Development

There is an increase in cyber-attacks against companies in your industry. Who should you alert?

- Human Resources
- Information Technology
- Business Development
- Engineers and Research & Development

Lesson Summary
Screen 4 of 4

Screen text: Counterintelligence Integration Plan

Today's objectives

- ✓ Defined countermeasures
- ✓ Identify employee vulnerability to targeting by foreign intelligence entities
- ✓ Identified the purpose of foreign travel and foreign visit programs
- ✓ Described CI training requirements for industry
- ✓ Explained counterintelligence and threat information reporting requirements

Narrator: Well, this completes your final training session.

The technology and information created, maintained, and updated by cleared industry is under constant threat from FIEs seeking to gain military, economic, and technological advantage.

Remember, timely and accurate reporting from cleared contractors, such as your company, is the primary tool DSS uses to identify and mitigate collection efforts targeting information and technology resident at cleared facilities.

Screen text: FSO HANDBOOK

Narrator: Let's have a look at what information you have collected for your CI Integration Plan.

Screen text: Use strategies for implementing countermeasures (selectable button)

- Train employees to recognize and report potential threats
- Control access to the target
- Deter FIEs from acting
- Delay the progress of any FIE into or out of the facility
- Respond to any active threat action
- Gather evidence for prosecution, investigations, and training
- Create an environment where people feel safe and secure and can focus on the company's goals
- Design programs to mitigate possible harm from hazards and FIEs

“Download” button to obtain a hard copy of the list

Screen text: Select the buttons to view what you have collected for your plan.

Select “Establish a Foreign Travel Program”

Screen text: Establish a Foreign Travel Program

- Conduct foreign travel pre-briefings
 - Vulnerability awareness
 - Personal safety
 - Terrorist threat
 - Assistance contacts
- Conduct foreign travel debriefings
 - Countries and dates visited
 - Irregularities at port of entry
 - Gifts or provisions received
 - Foreign inquiries
 - Requests received
 - Unexpected or unusual events
 - Suspicious foreign contacts

“Download” button to obtain a hard copy of the list

Select “Establish a Foreign Travel Program (cont.)”

Screen text: Establish a Foreign Travel Program (cont.)

Establish a Foreign Travel Program (cont.) (selectable button)

- Notify DSS CI Agent of visit
- Verify visitors’ identities
- Conduct pre-visit awareness briefings
- Designate visitor escorts
- Conduct post-visit debriefings

“Download” button to obtain a hard copy of the list

Select “Conduct CI training”

Screen text: Conduct CI Training

- Follow NISPOM initial and annual training requirements
- Publicize company SOPs relating to CI
- Incorporate DSS resources from the Counterintelligence Toolkit into training
- Establish a CI vigilance campaign and include such items as:
 - Weekly awareness
 - Monthly activities
 - Visual awareness reminders
 - Include social media

“Download” button to obtain a hard copy of the list

Select “Reporting”

Screen text: Reporting

- Publicize reporting requirements
 - Give examples of reportable events

“Download” button to obtain a hard copy of the list

Select the Next button to continue.

Practical Exercise

Practical Exercise Introduction

Screen 1 of 6

Screen text: You’re filling in for the FSO, your duties are to answer security questions and provide guidance.

Select the Next button to continue.

Practical Exercise Question 1
Screen 2 of 6

Michael: Hey there! I just have a quick question for you. I know that we have to report threats, but I am unsure what the role of CI is in threat awareness.

Screen text: Question: What is the role of reporting in counterintelligence and threat awareness? How should you respond to Michael? Select all that apply.

- Reporting is a form of self-monitoring that reduces the need for Government inspections at your facility.
- Reporting helps to disrupt foreign collection activity.
- Reporting identifies threats so that countermeasures can be developed.
- Reporting eliminates all risk.

Practical Exercise Question 2
Screen 3 of 6

Narrator: Hey there. I have a hypothetical situation for you. Let's say that coworkers Charles and Denise frequent the same bar. One night Denise observed Charles in a conversation with a man that she did not recognize. When Denise approached and greeted Charles, she noticed that he was discussing a component that they are developing and had actually sketched the component on a napkin. Charles and Denise work for a cleared contractor but their project is not classified. Should this event be reported?

Screen text: Question: An employee observes coworkers sharing images of and discussing a component that is in development in an unsecured location with a person she didn't recognize. Should this event be reported even though the information discussed is not classified? Select the best answer; then select Submit.

- Yes
- No

Practical Exercise Question 3
Screen 4 of 6

Audio: Phone rings.

Victor: Hello. This is Victor from Facilities Management. I'm in the Engineering Department. None of the engineers are here and the classified storage container is open. It's not just unlocked; the drawer is pulled out and there are several folders visible.

Question: To whom should you report this incident?
Select all that apply; then select Submit.

- FSO
- FBI
- DSS
- Local Law Enforcement

Practical Exercise Question 4

Screen 5 of 6

Narrator: Hello there. I am just returning from a trip to Turkey. So, I know that I need to schedule a debriefing with you but, something happened, and I want to know if I need to report it. While I was at the airport waiting for my return flight, a woman approached me and started a conversation about social media and how it allows women to share their successes. When the woman learned that I have a twitter account, she wanted to know who I was so that she could follow me. The woman asked if I could tweet about the company I work for, what I do, and who my coworkers are. I told her that I had to go and didn't give her my Twitter handle.

Question: Carolyn was approached by a stranger in the airport asking for Carolyn to share specific information about her job and coworkers over social media.

Should this event be reported?

Select the best answer; then select Submit.

- Yes
- No

Select the Next button to continue.

Practical Exercise Summary

Screen 6 of 6

Screen text: It has been a busy day covering for the FSO! You are happy that your research into CI over the past few weeks prepared you for this activity. Tomorrow, you will be back in your office to finish out your integration plan.

Select the Next button to continue.

Course Conclusion

Meeting with Company CEO

Screen 1 of 4

Screen text: Doug has come by to see you.

CI Integration Plan button.

Doug: Good morning. I was happy to get your message that you have a draft of the CI Integration Plan for me to review. Let's have a look at it.

Screen text: Select the CI Integration Plan button to continue.

Select "CI Integration Plan"

CI Integration Plan button hyperlinks to an external webpage.

Select "Continue"

Doug: Well, that is a good start. Let's get together with senior leadership on Thursday and discuss this plan. We can determine if this timeline will work across departments and make some assignments. Although we will depend on you as the FSO heavily, you can't make this work alone. All of senior leadership and key personnel from departments need to take some responsibility for integrating CI and threat awareness into our security program.

Screen text: Select the Next button to continue.

Course Summary

Screen 2 of 4

Narrator: Incorporating counterintelligence or CI and threat awareness into your security program makes our program stronger and more successful.

Screen text:

- ✓ Identified the purpose of incorporating CI and threat information into a security program.
- ✓ Identified CI and threat awareness policy requirements for industry and DoD personnel.
- ✓ Identified the role of DSS Counterintelligence Directorate in CI and threat awareness.
- ✓ Gave examples of types of threats.
- ✓ Identified employee vulnerability to targeting by foreign intelligence entities.
- ✓ Recognized common methods of operation used for collecting information.
- ✓ Explained the role of analytical risk management in risk mitigation.
- ✓ Identified key sources of threat information.
- ✓ Explained counterintelligence and threat information reporting requirements and procedures.

Narrator: Now, you should be able to recognize types of threats, common methods used to collect information, collection indicators and countermeasures, how the analytical risk management process can be used in risk mitigation, identification of threats, sources of threat information, and reporting requirements.

This knowledge will enable you to protect our company and its valuable assets, and in turn, the national security of the United States. Remember to look at the course resources before you go. There are several job aids that you may be able to use at your facility.

Screen text: Select the Next button to continue.

Conclusion

Screen 3 of 4

Screen text: Congratulations! You have completed the Protecting Assets in the NISP course.

Narrator: Congratulations! You have completed the Protecting Assets in the NISP Course.

Screen text: Select the Next button to continue.

Course Examination

Screen 4 of 4

Screen text: To receive course credit, you must take the course examination. Select the Take Exam button to launch the online exam.

Select "Take Exam"

"Take Exam" button should hyperlink

Answer Key

Introduction to CI and Threat Awareness

Knowledge Check Activity- Screen 2 of 3; Question 1 of 5

Question: CI is the information gathered and activities conducted to protect against what? Select all that apply, then select Submit.

- Espionage, sabotage, terrorism
- Assassinations conducted for or on behalf of foreign governments, organizations, or persons
- Activities by large companies to obtain operating capital within a foreign country
- International terrorist activities

Answer: Espionage, sabotage, terrorism; Assassinations conducted for or on behalf of foreign governments, organizations, or persons; International terrorist activities

Knowledge Check Activity- Screen 2 of 3; Question 2 of 5

Question: Integrating CI and threat awareness into a security program helps to accomplish which of the following? Select all that apply, then Select submit.

- Assist DoD in maintaining a tactical advantage over foreign intelligence operatives
- Protect valuable company assets from loss and compromise
- Identify which assets need protecting
- Establish countermeasures

Answer: Protect valuable company assets from loss and compromise; Identify which assets need protecting; Establish countermeasures

Knowledge Check Activity- Screen 2 of 3; Question 3 of 5

Question: DoD 5220.22-M NISPOM does which of the following for industry? Select all that apply, then select Submit.

- Controls the disclosure of classified information to contractors
- Identifies the cost associated with particular contracts
- Protects special classes of classified information
- Requires contractors to hire counterintelligence special agents

Answer: Controls the disclosure of classified information to contractors; Protects special classes of classified information

Knowledge Check Activity- Screen 2 of 3; Question 4 of 5

Question: The NISPOM requires that adverse information concerning cleared employees and any suspicious contacts be reported to DSS. Select the best answer.

- True

- False

Answer: True

Knowledge Check Activity- Screen 2 of 3; Question 5 of 5

Question: CI helps security officials to manage risk in which of the following ways? Select all that apply, then select Submit.

- Focus on assets and identify the threats to them
- Identify vulnerabilities
- Develop and apply countermeasures
- Develop investigation procedures
- Develop security classification guides

Answer: Focus on assets and identify the threats to them; Identify vulnerabilities; Develop and apply countermeasures

Identifying Threats

Screen 2 of 6 - Knowledge Check

Question: Which of the following are foreign collection methods? Select all that apply; then select Submit.

- Requests for information
- Solicitation and marketing
- Seeking employment
- Foreign visits
- Abduction and interrogation

Answer: Requests for information; Solicitation and marketing; Seeking employment; Foreign visits

Screen 3 of 6 - Knowledge Check

Question: Match Corresponding activities with its foreign collection methods.

FOREIGN COLLECTION METHOD

- A. Requests for Information
- B. Academic Solicitation
- C. Elicitation and Recruitment
- D. Solicitation and seeking employment
- E. Foreign visit
- F. Conferences, Conventions, and Trade Shows

ACTIVITY

_____ May use joint ventures or research partnerships

- _____ Unsolicited and direct requests often submitted via email
- _____ Application to degree programs associated with cleared facilities or programs
- _____ Experts may receive all-expense-paid invitations to lecture
- _____ Exchange employees or foreign business associates
- _____ Experts may receive all-expense-paid invitation to lecture

Answer:

- ___ D ___ May use joint ventures or research partnerships
- ___ A ___ Unsolicited and direct requests often submitted via email
- ___ B ___ Application to degree programs associated with cleared facilities or programs
- ___ F ___ Experts may receive all-expense-paid invitations to lecture
- ___ E ___ Exchange employees or foreign business associates
- ___ C ___ Involves establishing emotional relationship with the target

Screen 4 of 6 - Knowledge Check

Question: Match potential countermeasures with foreign collection methods

POTENTIAL COUNTERMEASURES

- A. Use mock-ups instead of actual equipment
- B. Share the minimum amount of information appropriate to the scope of the joint venture/research
- C. Conduct audits at least weekly
- D. Brief hosts and escorts on approved procedures

FOREIGN COLLECTION METHODS

- _____ Suspicious network activities
- _____ Conferences, Conventions, and Trade Shows
- _____ Foreign visits
- _____ Solicitation and seeking employment

Answer:

- ___ C ___ Suspicious network activities
- ___ A ___ Conferences, Conventions, and Trade Shows
- ___ D ___ Foreign visits
- ___ B ___ Solicitation and seeking employment

Screen 5 of 6 - Knowledge Check

Question: You decided that you need three specific types of information for the training session that you are planning. Match the information that you need with source from which you can obtain the information:

INFORMATION NEEDED

- A. Trends related to what is targeted and methods used
- B. Threat assessment for your current contract
- C. Identify the current national security concerns that may affect your facility
- D. Determine the types of crimes that are being committed at facilities close to your company

SOURCE

- _____ Federal Bureau of Investigations
- _____ State or Local Law Enforcement
- _____ DSS CI Directorate
- _____ Government Contracting Agency

Answer:

- C Federal Bureau of Investigations
- D State or Local Law Enforcement
- A DSS CI Directorate
- B Government Contracting Agency

Reporting Suspected Activity

Screen 1 of 1 - Situation 1

Screen text: Frank is an Aircraft Technical Data Controller. Last year, Frank supported a multi-national airshow where his company's newest aircraft was showcased. Frank was responsible for giving foreign pilots a "walk-around" of his company's aircraft.

After the airshow, one of the foreign pilots ran into Frank in the hotel lounge where they talked and watched a game together. Frank and the foreign pilot met for drinks at a tavern down the street from the hotel each evening for the remainder of the week until the air show was over.

Later, Frank was overheard discussing a free two-week vacation at the Khyber Himalayan Resort & Spa in the Himalayas with the foreign pilot. A few weeks later, Frank mentioned that his foreign pilot friend's overseas bank is securing his loan to purchase a timeshare in the outer banks.

Does this situation contain reportable activities or behavior?

- Yes
- No

Answer: Yes

Screen 1 of 1 - Situation 2

Screen text: Situation: During the monthly audit of the computers at your Seattle location, keystroke logging software was found loaded on computers in three separate work centers that handle classified technology. The login credentials of a single company employee were found to have been used to access each of the computers.

Does this situation contain reportable activities or behavior?

- No

Answer: Yes

Screen 1 of 1 - Situation 3

Screen text: Ian works in the Logistics department and has recently changed his work hours and started bringing a backpack to work. He comes to work half an hour before his scheduled start time and spends time talking with two individuals in the Research and Development department. He was observed putting a document in his backpack while in the R&D department one day.

Does this situation contain reportable activities or behavior?

- Yes
- No

Answer: Yes

Screen 1 of 1 - Situation 4

Screen text: Your company advertised a paid six-month internship in the engineering department. A foreign exchange student responded to the advertisement but her area of study in the U.S. was economics and she did not have the minimum required knowledge or skills for the internship. When we did not select her for an interview, she contacted HR by phone and offered to work without compensation under the internship. A week later, she came to the facility and tried to speak with “the person in charge of the internship.”

Does this situation contain reportable activities or behavior?

- Yes
- No

Answer: Yes

Screen 1 of 1 - Situation 5

Screen text: The Research and Development department had an unannounced visit from two men representing themselves as working for a company that wanted to establish a joint venture. They asked for a tour of your facility to determine if your research capability and quality standards were sufficient for them to accept as a partner. We, of course, refused to give them a tour, took the business cards, and notified the Business Development department. When Business Development attempted to contact the company, the phone number was to a person's residence who knew nothing about the business.

Does this situation contain reportable activities or behavior?

- Yes
- No

Answer: Yes

Screen 2 of 4 - Knowledge Check Activity

Screen text: Question 1 of 4

Which of the following activities can you use to promote CI awareness within your facility? Select all that apply.

- Enlist your DSS CI Special Agent to brief employees
- Post CI-related material throughout the workplace
- Share actual targeting examples with employees
- Remind employees that anyone who appears "foreign" is a threat

Answer: Enlist your DSS CI Special Agent to brief employees; Post CI-related material throughout the workplace; Share actual targeting examples with employees

Narrator: Which of the following activities can you use to promote CI awareness within your facility?

Screen text: Question 2 of 4

Foreign travel increases the risk of FIE targeting.

- True
- False

Answer: True

Screen text: Question 3 of 4

The National Industrial Security Program Operating Manual (NISPOM) requires employees of cleared industry to report which of the following events? Select all that apply.

- Suspicious contacts
- Lost or compromised classified information
- Actions/events that may affect the status of an employee's personnel security clearance
- Actions/events that may affect the status of the facility's clearance

- Actual, probable, or possible espionage, sabotage, terrorism, of subversive activities

Answer: Suspicious contacts; Lost or compromised classified information; Actions/events that may affect the status of an employee's personnel security clearance; Actions/events that may affect the status of the facility's clearance; Actual, probable, or possible espionage, sabotage, terrorism, of subversive activities

Screen text: Question 4 of 4

Which of the following groups are vulnerable to foreign intelligence entity targeting? Select all that apply.

- Information technology
- Facility management
- Employees traveling abroad
- Administrative assistants

Screen 3 of 4 - Knowledge Check Activity

Screen text: You learn from a security bulletin that a foreign country is using university students applying for low level jobs to gain entry into companies in your industry. Which group might you alert first?
